PROFESSIONAL SUMMARY

I'm a Data Scientist with two years of experience building predictive models and analysing complex datasets for financial services and e-commerce companies. I have a strong foundation in Python and SQL, with practical experience in machine learning and statistical analysis. I'm particularly interested in working with time series data and developing solutions that directly impact business decisions. Outside of work, I enjoy exploring new data visualisation techniques and contributing to open source projects.

WORK EXPERIENCE

Data Scientist

Quantix Analytics Ltd

quantixanalytics.io

Bristol, United Kingdom

March 2023 - Present

Developed and deployed a customer churn prediction model using gradient boosting that identified at-risk clients with 87% accuracy, leading to a retention campaign that recovered GBP 240,000 in annual recurring revenue.

Built automated data pipelines in Python to process daily datasets from multiple sources, reducing manual reporting time by 12 hours per week and improving data quality by 15%.

Collaborated with the product team to design A/B testing frameworks, analysing results from five concurrent experiments to inform feature prioritisation and optimise user conversion rates.

Created interactive dashboards using Tableau to visualise KPIs for stakeholders, enabling management to monitor business health metrics in real-time and make data-driven decisions.

Junior Data Scientist

TechFlow Solutions

techflow-solutions.co.uk

Bristol, United Kingdom

September 2022 - February 2023

Analysed customer transaction data using SQL and pandas to identify spending patterns, revealing a high-value customer segment that increased targeted marketing ROI by 23%.

Implemented feature engineering techniques to improve model performance on a fraud detection system, achieving a 5% improvement in precision without compromising recall.

Supported senior data scientists in developing regression models to forecast inventory demand, helping the operations team reduce stockouts by 18% over a six-month period.

Conducted exploratory data analysis on survey feedback data and presented findings to non-technical stakeholders using clear visualisations and written summaries.

Data Analyst Intern

Digital Insights Ltd

digitalinsights.net

Bristol, United Kingdom

June 2022 - August 2022

Extracted and cleaned datasets from various sources including APIs and CSV files, ensuring data integrity and preparing datasets for analysis by senior team members.

Performed statistical analysis on user engagement metrics using Python, identifying which product features correlated with higher retention rates.

Assisted in creating data dictionaries and documentation for company datasets, which improved team efficiency when onboarding new analysts.

Shadowed data scientists during model development projects and contributed to testing predictions on validation datasets.

EDUCATION

BSc Mathematics and Statistics

University of Bristol

Bristol, United Kingdom

Graduated: June 2022

Grade: Upper Second Class Honours (2:1)

TECHNICAL SKILLS

Programming Languages: Python, SQL, R

Data Analysis and Visualisation: Pandas, NumPy, Matplotlib, Seaborn, Tableau

Machine Learning: Scikit-learn, XGBoost, LightGBM, regression and classification models

Databases: PostgreSQL, MySQL

Statistics: Hypothesis testing, A/B testing, time series analysis, statistical distributions

Tools and Platforms: Jupyter Notebook, Git, Apache Airflow, AWS S3
