PROFESSIONAL SUMMARY

I'm a backend engineer with 5 years of experience building scalable server-side systems and APIs. I started my career at a fintech startup where I learned to move quickly and make pragmatic decisions under pressure. Since then I've worked with teams across different industries and I enjoy the challenge of optimizing database queries as much as designing new microservices from scratch. I'm particularly interested in systems that handle high throughput and I like working with engineers who think carefully about their architecture decisions.

TECHNICAL SKILLS

Languages: Python, Java, Go, JavaScript

Databases: PostgreSQL, MongoDB, Redis, MySQL

Frameworks: Django, Spring Boot, FastAPI, Express.js

Cloud Platforms: AWS (EC2, S3, RDS, Lambda), Google Cloud Platform

Tools and Technologies: Docker, Kubernetes, Git, Jenkins, Prometheus, Grafana

Message Queues: RabbitMQ, Apache Kafka

APIs: RESTful API design, GraphQL basics

Testing: Unit testing, Integration testing, pytest, JUnit

WORK EXPERIENCE

Senior Backend Engineer

TechVault Solutions

www.techvault.co.net

Manchester, United Kingdom

March 2023 - Present

Designed and implemented a new payment processing service using Go and PostgreSQL that handles 50,000 transactions daily with 99.95% uptime

Migrated three legacy monolithic services into containerized microservices using Docker and Kubernetes, reducing deployment time from 45 minutes to 8 minutes

Implemented distributed tracing with Jaeger and improved API response times by 35% through database query optimization and Redis caching

Led onboarding of two junior engineers and conducted code reviews for backend team of six developers

Backend Engineer

DataStream Analytics Ltd

www.datastream.io

London, United Kingdom

June 2021 - February 2023

Built and maintained real-time data ingestion pipeline using Apache Kafka and Python that processed 100,000 events per second from IoT devices

Developed REST APIs serving machine learning models with FastAPI, enabling data science team to expose predictions to 15+ client applications

Implemented comprehensive monitoring and alerting system using Prometheus and Grafana which reduced incident response time by 60%

Collaborated with DevOps team to establish CI/CD pipelines using Jenkins, reducing manual deployment errors from 8% to 0.2%

Junior Backend Engineer

FinFlow Systems

www.finflow.net

Manchester, United Kingdom

July 2019 - May 2021

Developed customer account management APIs using Django REST Framework and PostgreSQL serving 50,000 monthly active users

Optimized slow database queries reducing API response times from 2 seconds to 200ms, significantly improving user experience

Implemented automated unit and integration tests achieving 82% code coverage using pytest

Built internal admin dashboard for customer support team, reducing ticket resolution time by 25%

EDUCATION

Bachelor of Science in Computer Science

University of Manchester

Manchester, United Kingdom

Graduated: July 2019

Grade: 2:1 Upper Second Class Honours

ADDITIONAL INFORMATION

Certifications: AWS Certified Cloud Practitioner

Languages: English (Native)
