PROFESSIONAL SUMMARY

I'm a junior data engineer based in Paris with 1 year of hands-on experience building data pipelines and working with cloud infrastructure. I started my career working with Python and SQL to move data between systems, and I've since picked up Spark and basic cloud engineering. I'm particularly drawn to solving problems that involve data quality and ETL optimization. I learn quickly and enjoy collaborating with analysts and engineers to understand what data actually needs to flow where.

WORK EXPERIENCE

Data Engineer

DataFlow Systems

Paris, France

January 2024 - Present

www.dataflowsystems.io

Developed and maintained Python-based ETL pipelines processing 50GB of daily data from multiple sources using Apache Airflow for orchestration

Built SQL transformation scripts to clean and aggregate customer transaction data, reducing data quality issues by 35% within the first three months

Collaborated with the analytics team to design a fact table structure for their BI dashboards, improving query performance by 40%

Participated in on-call rotation for production data pipelines and resolved 12 critical incidents related to data latency and accuracy

Junior Data Engineer

CloudVault Analytics

Paris, France

June 2023 - December 2023

www.cloudvaultanalytics.co

Implemented batch data pipelines in AWS using Python and boto3 to ingest data from 8 different SaaS platforms into S3 and Redshift

Wrote comprehensive unit tests and integration tests for data pipeline components, achieving 85% code coverage

Assisted with migrating legacy Talend jobs to Apache Spark, reducing processing time by 2.5 hours per batch run

Documented data schemas and pipeline architecture for onboarding new team members and created runbooks for common troubleshooting scenarios

Data Operations Intern

InsightMetrics

Paris, France

February 2023 - May 2023

www.insightmetrics.net

Loaded data into PostgreSQL databases using Python scripts and SQL, preparing datasets for the analytics team to use in reporting

Identified and logged data quality issues in source systems, providing feedback to engineering teams to fix upstream problems

Created simple monitoring dashboards in Grafana to track daily row counts and processing times across 5 main data feeds

Assisted with database maintenance tasks including backup verification and index optimization

EDUCATION

Master's Degree in Data Science

Université Paris-Saclay

Gif-sur-Yvette, France

Graduated: June 2023

Bachelor's Degree in Computer Science

Université de Paris

Paris, France

Graduated: June 2021

TECHNICAL SKILLS

Programming Languages: Python, SQL, Bash

Data Processing: Apache Spark, Apache Airflow, Pandas, NumPy

Databases: PostgreSQL, MySQL, Redshift, DynamoDB

Cloud Platforms: AWS (S3, EC2, Redshift, Lambda), basics of Google Cloud

Data Formats: JSON, CSV, Parquet, Avro

Tools and Platforms: Git, Docker, Grafana, Talend, Jupyter Notebooks

Version Control: GitHub, GitLab

PUBLIC REPOSITORIES

github.com/marcdelacroix/airflow-etl-template

Simple Airflow DAG template for batch ETL pipelines with error handling and notifications

github.com/marcdelacroix/spark-data-cleaner

PySpark application for standardizing and validating customer data formats

github.com/marcdelacroix/redshift-migration-scripts

Collection of Python scripts used to migrate 15 Talend jobs to Spark on AWS

github.com/marcdelacroix/postgres-monitoring

Custom monitoring agent for PostgreSQL database health and performance metrics

CERTIFICATIONS

AWS Certified Cloud Practitioner (2023)

LANGUAGES

French: Native

English: Professional Working Proficiency (B2)
