PROFESSIONAL SUMMARY

Backend engineer with 4 years of experience building and maintaining scalable server-side applications. I've spent the last few years working primarily with Python and Node.js, helping teams move from monolithic architectures to microservices. I enjoy writing clean code that other people can understand and maintain, and I'm particularly interested in database optimization and API design. Outside of work, I contribute to a few open source projects and spend far too much time thinking about system design problems.

WORK EXPERIENCE

Senior Backend Developer

TechVision Solutions

www.techvisionsolutions.io

Liverpool, United Kingdom

August 2022 - Present

Redesigned the payment processing pipeline to handle 3x more concurrent transactions, reducing latency from 800ms to 280ms through implementation of asynchronous task queues using Celery and Redis.

Led the migration of a legacy monolithic application to microservices architecture, resulting in 40% reduction in deployment time and improved team velocity across 6 backend developers.

Implemented comprehensive database indexing strategy and query optimization that decreased average API response times by 35% without requiring additional infrastructure investment.

Mentored two junior developers on REST API design principles, code review practices, and debugging techniques, with both progressing to independent feature ownership within 6 months.

Backend Engineer

DataFlow Systems Ltd

www.dataflowsystems.co

Manchester, United Kingdom

March 2021 - July 2022

Developed and deployed 12 new REST API endpoints supporting the analytics dashboard, handling approximately 50,000 requests per day with 99.8% uptime.

Optimized PostgreSQL database queries used by the reporting module, achieving 60% faster report generation times and reducing database connection pool exhaustion incidents.

Implemented automated data validation and cleansing processes that reduced manual data correction workload by 25 hours per week across the operations team.

Built comprehensive logging and monitoring infrastructure using ELK stack, enabling rapid identification and resolution of production issues, reducing mean time to resolution from 4 hours to 45 minutes.

Junior Backend Developer

WebCore Technologies

www.webcoretech.net

Liverpool, United Kingdom

June 2020 - February 2021

Contributed to the development of user authentication and authorization systems handling 100,000+ active users across multiple applications and services.

Wrote unit and integration tests achieving 78% code coverage, identifying and fixing 23 bugs before they reached production environments.

Participated in daily standups, code reviews, and sprint planning meetings while learning best practices from senior team members with 8+ years of experience.

Assisted with infrastructure maintenance tasks including database backups, log rotation, and monitoring alert configuration on AWS EC2 instances.

EDUCATION

Bachelor of Science in Computer Science

University of Manchester

Manchester, United Kingdom

Graduated: June 2020

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, SQL, Bash

Frameworks and Libraries: Django, Flask, Express.js, FastAPI

Databases: PostgreSQL, MySQL, MongoDB, Redis

Cloud and DevOps: AWS (EC2, S3, RDS, Lambda), Docker, Docker Compose, Jenkins

Tools and Platforms: Git, Linux, JIRA, Postman, DataGrip

Other: REST APIs, Microservices Architecture, Message Queues (Celery, RabbitMQ), Unit Testing, System Design
