PROFESSIONAL SUMMARY

DevOps engineer with 4 years of experience building and maintaining cloud infrastructure across AWS and on-premises environments. I've worked with containerized applications, CI/CD pipelines, and Kubernetes clusters in fast-paced startup settings. I enjoy solving infrastructure problems that directly impact product delivery and have a practical approach to automation that balances reliability with simplicity.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, S3, RDS, CloudFormation, Lambda), Azure

Containerization: Docker, Kubernetes, Docker Compose

CI/CD Tools: Jenkins, GitLab CI, GitHub Actions

Infrastructure as Code: Terraform, CloudFormation, Ansible

Monitoring and Logging: Prometheus, Grafana, ELK Stack, CloudWatch

Scripting Languages: Bash, Python, Go

Databases: PostgreSQL, MySQL, MongoDB

Version Control: Git, GitHub, GitLab

Web Servers: Nginx, Apache

Operating Systems: Linux (Ubuntu, CentOS), Windows Server

WORK EXPERIENCE

DevOps Engineer

TechFlow Solutions Ltd

Liverpool, United Kingdom

January 2023 - Present

Designed and deployed Kubernetes clusters supporting microservices across development and production environments, reducing container orchestration costs by 30 percent through resource optimization.

Implemented comprehensive monitoring and alerting using Prometheus and Grafana, decreasing mean time to detection of incidents from 45 minutes to 8 minutes.

Automated infrastructure provisioning using Terraform and Ansible, enabling developers to spin up full application stacks in under 20 minutes without manual intervention.

Collaborated with the security team to implement runtime security scanning and container vulnerability assessments, identifying and remediating 15 critical issues before production deployment.

Senior DevOps Engineer

CloudNine Systems

Manchester, United Kingdom

June 2021 - December 2022

Led the migration of legacy monolithic applications to containerized microservices running on Kubernetes, handling deployment of 12 services while maintaining zero downtime.

Established CI/CD pipelines using GitLab CI that automated testing, building, and deployment, reducing release cycles from 2 weeks to 3 days.

Built custom Python scripts for AWS infrastructure automation, saving 8 hours per week of manual management tasks across 40 production instances.

Mentored 2 junior team members on DevOps best practices, contributing to their progression and knowledge of containerization and infrastructure as code.

Junior DevOps Engineer

DataCore Innovations

Liverpool, United Kingdom

August 2019 - May 2021

Managed AWS infrastructure including EC2 instances, RDS databases, and S3 buckets across multiple environments, ensuring 99.8 percent uptime.

Implemented logging and centralized monitoring using the ELK Stack for 8 applications, enabling quick diagnosis of production issues.

Created Bash and Python automation scripts to streamline routine operational tasks, improving team efficiency by eliminating repetitive manual processes.

Assisted with disaster recovery planning and testing, documenting runbooks for 12 critical applications and conducting quarterly recovery drills.

EDUCATION

Bachelor of Science in Computer Science

University of Manchester

Manchester, United Kingdom

Graduated: June 2019

ADDITIONAL INFORMATION

Open Source Contributions:

kubernetes-autoscaling-tools - Contributed custom metrics autoscaler plugin for HPA

prometheus-custom-exporters - Built 3 custom exporters for application-specific monitoring

terraform-aws-modules - Submitted improvements to VPC and networking modules

nginx-lua-security - Added request filtering and rate limiting enhancements

Certifications:

AWS Certified Solutions Architect Associate (2022)

Kubernetes Application Developer (CKAD) (2023)
