PROFESSIONAL SUMMARY

I'm a research engineer with six years of experience building machine learning systems and developing novel approaches to real-world problems. I've spent my career exploring the intersection of academic research and practical engineering, moving from pure algorithmic work into systems that actually scale. My background spans computer vision, deep learning, and distributed systems, and I genuinely enjoy mentoring junior engineers while pushing the boundaries of what's technically possible.

WORK EXPERIENCE

Senior Research Engineer

Neuraltech Solutions

neuraltech.io

Paris, France

March 2022 - Present

Designed and implemented a distributed training pipeline that reduced model training time by 65 percent across multiple GPU clusters, enabling experimentation with larger datasets.

Led a team of three junior engineers in developing novel computer vision architectures for industrial quality inspection, resulting in a 12 percent improvement in detection accuracy compared to existing baselines.

Conducted literature reviews and proof-of-concept experiments for transformer-based approaches in our core product, publishing findings internally and presenting at two company research seminars.

Established code review standards and best practices for research code, reducing deployment bugs by 40 percent and improving reproducibility across projects.

Research Engineer

DataFlow Systems

dataflow.net

Lyon, France

June 2020 - February 2022

Developed and optimized deep learning models for time-series forecasting, achieving state-of-the-art results on three industry benchmark datasets with improvements ranging from 8 to 15 percent.

Built Python frameworks for experiment management and hyperparameter optimization, reducing the time researchers spent on infrastructure concerns and allowing focus on algorithmic innovation.

Collaborated with product engineers to deploy machine learning models into production environments, addressing latency and memory constraints through model quantization and knowledge distillation techniques.

Wrote comprehensive documentation and conducted knowledge-sharing sessions on our internal machine learning tools, enabling faster onboarding for new team members.

Machine Learning Engineer

Innovatech Research Labs

Paris, France

September 2018 - May 2020

Implemented convolutional neural networks for medical image analysis, contributing to a research paper on automated disease detection that was presented at an international conference.

Participated in the full lifecycle of machine learning projects from data collection and annotation to model evaluation and deployment, working closely with domain experts to understand problem constraints.

Optimized existing algorithms for edge devices by implementing quantization and pruning techniques, reducing model size by 75 percent while maintaining acceptable accuracy thresholds.

Maintained and improved a shared GPU cluster serving the entire research team, implementing scheduling systems and monitoring tools that improved resource utilization from 45 to 78 percent.

EDUCATION

Master of Science in Computer Science

Université Pierre et Marie Curie (Sorbonne Université)

Paris, France

Graduated June 2018

Specialization: Machine Learning and Artificial Intelligence

Bachelor of Science in Computer Science

Université Pierre et Marie Curie (Sorbonne Université)

Paris, France

Graduated June 2016

TECHNICAL SKILLS

Programming Languages: Python, C++, Java, SQL

Machine Learning Frameworks: PyTorch, TensorFlow, Scikit-learn, JAX

Deep Learning: Convolutional Neural Networks, Transformers, Recurrent Neural Networks, Transfer Learning

Computer Vision: Image Classification, Object Detection, Semantic Segmentation, Image Processing

Tools and Platforms: Docker, Kubernetes, Git, Jupyter, Weights & Biases, TensorBoard

Distributed Systems: Multi-GPU Training, Ray, Apache Spark, Distributed Data Processing

Data Engineering: Data Pipeline Development, ETL Processes, Data Validation

Research Methodologies: Experimental Design, Statistical Analysis, Literature Review, Technical Writing
