PROFESSIONAL SUMMARY

Experienced Data Engineer with 10 years of hands-on expertise in designing and maintaining large-scale data pipelines and data warehouse solutions. I have spent the last decade working with Fortune 500 companies and innovative startups in Madrid, building robust ETL systems that process terabytes of data daily. My approach focuses on practical solutions that balance performance with maintainability, and I take pride in mentoring junior engineers while staying current with evolving data technologies.

WORK EXPERIENCE

Staff Data Engineer

DataFlow Systems

dataflowsys.io

Madrid, Spain

March 2021 - Present

Led the redesign of our core data pipeline infrastructure, reducing query latency by 45% and cutting cloud costs by 35% through optimized data partitioning strategies and storage tiering.

Architected and implemented a real-time streaming platform using Apache Kafka and Spark that processes 500 million events daily for our analytics and ML teams.

Mentored a team of 4 junior engineers, establishing coding standards, conducting code reviews, and designing a comprehensive data engineering onboarding program that reduced time-to-productivity from 3 months to 6 weeks.

Collaborated with data science teams to build feature pipelines that support model training and inference, implementing automated data validation to catch quality issues before they impact downstream systems.

Senior Data Engineer

TechVision Solutions

techvision.net

Madrid, Spain

June 2017 - February 2021

Designed and built the company's first modern data warehouse on Google BigQuery, migrating legacy systems and establishing it as the single source of truth for 200+ business users across finance, marketing, and operations.

Developed Python and SQL-based ETL jobs that consolidated data from 15+ disparate sources including APIs, databases, and third-party SaaS platforms, ensuring daily data freshness and 99.5% pipeline reliability.

Optimized critical business intelligence queries that were running in 45+ minutes down to 2 minutes by restructuring schemas, implementing appropriate indexing, and creating materialized views.

Implemented comprehensive monitoring and alerting using DataDog and custom Python scripts, reducing mean time to resolution for data incidents from 8 hours to under 30 minutes.

Data Engineer

Insight Analytics

insightanalytics.co

Madrid, Spain

July 2013 - May 2017

Built and maintained production ETL pipelines using Informatica and custom Python scripts that processed customer transaction data for reporting and regulatory compliance purposes.

Collaborated with database administrators to design normalized schemas for operational databases supporting 50+ concurrent users with sub-second query response times.

Created automated data quality frameworks that validated millions of records nightly, identifying corruption issues before data reached downstream systems and reducing manual data corrections by 80%.

Supported ad-hoc analytics requests from business teams by writing complex SQL queries and creating temporary data marts, turning around most requests within 24 hours.

EDUCATION

Master of Science in Data Engineering and Big Data

Universidad Politecnica de Madrid

Madrid, Spain

Graduated: June 2013

Bachelor of Science in Computer Science

Universitat Autònoma de Barcelona

Barcelona, Spain

Graduated: June 2011

TECHNICAL SKILLS

Data Technologies: Apache Spark, Apache Kafka, Apache Airflow, Pandas, NumPy

Databases: PostgreSQL, MySQL, MongoDB, Google BigQuery, Snowflake

Programming Languages: Python, SQL, Scala, Java

ETL Tools: Informatica, dbt, Talend

Cloud Platforms: Google Cloud Platform, AWS, Azure

Tools and Infrastructure: Git, Docker, Kubernetes, Linux, Terraform

Data Formats: JSON, CSV, Parquet, Protocol Buffers, Avro
