PROFESSIONAL SUMMARY

Backend engineer with 14 years building scalable systems for fintech and e-commerce platforms across Europe. I started in PHP but moved to Java and Go to handle high-throughput services. I enjoy mentoring junior developers and have led architectural decisions that reduced infrastructure costs by 30-40% at my last two positions. Currently based in Paris and looking for roles where I can contribute to system design while staying hands-on with code.

WORK EXPERIENCE

Staff Backend Engineer

TechVault

techvault.io

Paris, France

March 2021 - Present

Led the redesign of payment processing microservices handling 500K+ transactions daily, reducing latency by 45% through implementation of event streaming with Kafka

Established backend engineering standards and code review practices adopted across 12 engineers, improving deployment reliability from 94% to 99.2%

Mentored 4 junior backend developers through pair programming sessions and design document reviews, with 2 promoted to senior roles within 18 months

Built automated performance testing framework that caught 8 production issues before deployment, saving estimated 2 million euros in customer refunds

Senior Backend Engineer

Marketplace Solutions

marketplace-solutions.net

Lyon, France

June 2017 - February 2021

Architected microservices migration from monolithic Java application to distributed system using Go and gRPC, handling 50 million requests per day

Designed and implemented PostgreSQL optimization strategy that reduced query execution time by 60% and cut database infrastructure costs by 35%

Managed on-call rotations and incident response, implementing post-mortem processes that reduced mean time to resolution by 40%

Collaborated with frontend and DevOps teams to deploy 47 releases without unplanned downtime over 3.5 years

Backend Engineer

Innovate Digital Services

innovatedigital.co

Paris, France

September 2010 - May 2017

Developed and maintained RESTful APIs in PHP and Java serving 2 million active users, achieving 99.8% uptime across the platform

Implemented caching layer using Redis that reduced database load by 50% and improved response times from 800ms to 120ms

Participated in on-call support and resolved critical production issues affecting user-facing services with average resolution time of 45 minutes

Contributed to open source projects and presented technical talks at 3 local Paris tech meetups on API design and database optimization

EDUCATION

Diplôme d'Ingénieur in Computer Science

ENSIMAG (Grenoble INP)

Grenoble, France

Graduated June 2010

TECHNICAL SKILLS

Languages: Java, Go, PHP, Python, SQL

Databases: PostgreSQL, MySQL, MongoDB, Redis

Messaging: Kafka, RabbitMQ, AWS SQS

Cloud Platforms: AWS, Google Cloud Platform

Containerization: Docker, Kubernetes

Version Control: Git

Monitoring and Logging: ELK Stack, Prometheus, Grafana

API Protocols: REST, gRPC, GraphQL

Agile and Testing: JUnit, Pytest, TDD practices
