PROFESSIONAL SUMMARY

I'm a software engineer with six years of hands-on experience building scalable backend systems and APIs. I've spent the last three years at a fintech startup where I led the migration of our monolithic application to microservices, cutting deployment times from hours to minutes. I enjoy mentoring junior developers and solving complex architectural problems, though I'm happiest when I'm actually writing code rather than sitting in meetings.

WORK EXPERIENCE

Senior Software Engineer

FinFlow GmbH

www.finflow.io

Berlin, Germany

March 2022 - Present

Led the redesign of our payment processing pipeline, reducing transaction latency by 40 percent and handling 500K daily transactions across 12 European markets.

Mentored four junior engineers and established code review standards that improved overall code quality and reduced production bugs by 35 percent.

Architected and implemented a distributed tracing system using OpenTelemetry, significantly improving visibility into system performance and enabling faster incident response.

Designed and deployed a real-time notification service handling 2 million events per day, achieving 99.95 percent uptime across multiple availability zones.

Software Engineer

CloudVault Solutions

www.cloudvault.net

Berlin, Germany

July 2020 - February 2022

Developed and maintained microservices for a cloud storage platform serving over 100K users, working with Java Spring Boot and Kubernetes in AWS.

Implemented comprehensive logging and monitoring infrastructure using Elasticsearch and Grafana, reducing mean time to resolution for incidents by 50 percent.

Collaborated with DevOps team to optimize database queries, reducing query execution times from 800ms to 120ms for critical user-facing endpoints.

Contributed to open source projects and delivered technical presentations to the engineering community on scalability patterns.

Junior Software Engineer

DataTech Berlin

www.datatech.co

Berlin, Germany

January 2019 - June 2020

Built REST APIs and data processing pipelines using Python and PostgreSQL for a business intelligence platform with 50K daily active users.

Participated in agile ceremonies and took ownership of medium-sized features from design through deployment and monitoring.

Improved application startup time by 60 percent through code profiling and optimization of initialization routines.

Wrote integration tests and contributed to documentation, helping onboard new team members and reduce onboarding time from three weeks to one week.

EDUCATION

Diplom in Informatik

Technische Universität Berlin

Berlin, Germany

Graduated June 2018

SKILLS

Programming Languages: Java, Python, Go, SQL, JavaScript

Backend Technologies: Spring Boot, FastAPI, PostgreSQL, MongoDB, Redis

Cloud and DevOps: AWS, Kubernetes, Docker, CI/CD pipelines, Infrastructure as Code

System Design: Microservices architecture, distributed systems, API design, event-driven systems

Tools and Platforms: Git, Gradle, Maven, Jenkins, DataDog, Prometheus, Grafana

Other: Agile methodologies, REST APIs, gRPC, Apache Kafka, system performance optimization
