PROFESSIONAL SUMMARY

Data scientist based in Amsterdam with 1 year of experience building machine learning models for business applications. I started my career working on predictive analytics projects where I discovered a real passion for turning raw data into actionable insights. My background in mathematics gives me a strong foundation in statistical modeling, and I'm most engaged when I can combine that with practical Python development to solve real problems.

WORK EXPERIENCE

Junior Data Scientist

DataViz Solutions

Amsterdam, Netherlands

www.dataviz-solutions.io

March 2024 - Present

Developed and deployed a customer churn prediction model using logistic regression that identified 200+ at-risk customers, resulting in targeted retention campaigns with 18% success rate improvement.

Created automated weekly reporting dashboards in Python using Pandas and Matplotlib that reduced manual data compilation time from 8 hours to 30 minutes.

Collaborated with the sales team to analyze deal pipeline data and discovered seasonal patterns that informed Q3 planning, contributing to 12% revenue increase.

Participated in code reviews and contributed to team documentation standards, helping establish best practices for ML model versioning and experiment tracking.

Data Analyst Intern

Fintech Analytics Group

Amsterdam, Netherlands

www.fintech-analytics.net

September 2023 - February 2024

Cleaned and preprocessed financial transaction datasets containing 5M+ records using SQL and Python, achieving 99.2% data quality for downstream analysis.

Built exploratory data analysis notebooks investigating fraud patterns that identified 3 new suspicious transaction categories, with findings presented to compliance team.

Assisted senior data scientist in feature engineering for credit risk model, contributing 8 new features that improved model AUC score from 0.72 to 0.79.

Trained 2 new interns on data pipeline workflows and documentation practices during transition period.

Data Science Bootcamp Graduate - Capstone Project

CareerPath Academy

Amsterdam, Netherlands

www.careerpath-academy.co

January 2023 - August 2023

Completed intensive 6-month data science bootcamp covering Python, SQL, machine learning, and statistical analysis with final capstone grade of 92%.

Developed end-to-end recommendation system for e-commerce using collaborative filtering and content-based methods, evaluated on test set with 0.84 RMSE score.

Presented capstone project findings to academy staff and peer cohort, demonstrating ability to communicate complex technical concepts to non-technical stakeholders.

Maintained GitHub portfolio throughout bootcamp with 12+ completed projects covering data cleaning, EDA, supervised and unsupervised learning techniques.

EDUCATION

Bachelor of Science in Mathematics

University of Amsterdam

Amsterdam, Netherlands

September 2019 - June 2023

Relevant Coursework: Linear Algebra, Statistics, Probability Theory, Calculus, Computational Mathematics

SKILLS

Programming Languages: Python, SQL, R

Machine Learning: Logistic Regression, Decision Trees, Random Forest, K-Means Clustering, Feature Engineering

Data Analysis: Pandas, NumPy, Scikit-Learn, SQL

Visualization: Matplotlib, Seaborn, Tableau

Tools & Platforms: Jupyter Notebook, Git, Google Colab, Excel

Statistical Methods: Hypothesis Testing, A/B Testing, Correlation Analysis

GITHUB REPOSITORIES

github.com/marcusvandermeer/customer-churn-prediction

Logistic regression model predicting customer churn with feature importance analysis and model evaluation metrics.

github.com/marcusvandermeer/housing-price-regression

Multiple linear regression project analyzing factors affecting house prices in Amsterdam with exploratory data analysis.

github.com/marcusvandermeer/credit-risk-classification

Binary classification model for credit approval decisions with confusion matrix and ROC curve analysis.

github.com/marcusvandermeer/ecommerce-recommendation-system

Collaborative filtering recommendation engine with performance evaluation on e-commerce dataset.
