PROFESSIONAL SUMMARY

I'm a Principal Engineer with seven years building infrastructure and backend systems that handle real-world complexity. I've led teams through migrations of legacy applications, designed systems processing millions of transactions daily, and mentored engineers solving hard architectural problems. I prefer getting hands-on with code while helping others grow, and I'm drawn to problems where technical decisions have measurable business impact.

WORK EXPERIENCE

Principal Engineer

TechVault Systems, Copenhagen, Denmark

techvault.io

January 2023 - Present

Promoted to principal level after demonstrating consistent technical leadership across multiple platform initiatives. Led architectural redesign of core payment processing system that reduced latency by 65% and increased throughput from 50k to 200k requests per second. Established engineering standards for database query optimization and code review practices that became mandatory across the organization. Mentored five senior engineers in system design and helped three transition into staff-level roles.

Senior Backend Engineer

DataFlow Nordic, Copenhagen, Denmark

dataflownordic.co

June 2020 - December 2022

Built and maintained distributed data processing pipelines supporting analytics for 15 enterprise clients. Designed event streaming architecture using Apache Kafka that replaced a legacy batch system, reducing data latency from hours to seconds. Conducted on-call rotations and reduced critical incident response time from 40 minutes to 8 minutes through better observability tooling. Wrote technical specifications and led code reviews for a team of four engineers on the backend platform.

Software Engineer

CloudNine Solutions, Copenhagen, Denmark

cloudnine.net

February 2018 - May 2020

Developed microservices for an insurance platform serving 50,000 daily active users. Migrated a monolithic Node.js application to containerized Go services, improving deployment frequency from monthly to daily releases. Implemented comprehensive monitoring and alerting using Prometheus and Grafana that reduced mean time to detection for production issues. Contributed to API design standards and led technical interviews for hiring backend engineering candidates.

EDUCATION

Master of Science in Computer Science

University of Copenhagen

2016 - 2018

Thesis: Distributed Consensus in High-Latency Networks

Bachelor of Science in Software Engineering

Aalborg University

2013 - 2016

SKILLS

Languages: Go, Python, JavaScript, Java, SQL

Backend and Infrastructure: Microservices architecture, Kubernetes, Docker, distributed systems, Apache Kafka, event streaming, API design

Databases: PostgreSQL, MongoDB, Redis, database optimization

DevOps and Observability: Prometheus, Grafana, ELK Stack, CI/CD pipelines, cloud infrastructure (AWS)

Leadership: Technical mentoring, architectural planning, cross-functional collaboration, hiring and team building
