PROFESSIONAL SUMMARY

I'm a staff engineer with ten years building scalable backend systems and leading technical initiatives at fast-growing companies. I've spent the last four years mentoring engineers and driving architectural decisions that reduced our infrastructure costs by 40 percent. I prefer solving hard problems through pragmatic design rather than following trends, and I genuinely enjoy helping junior engineers develop their skills.

TECHNICAL SKILLS

Languages: Go, Python, Java, SQL, Bash

Databases: PostgreSQL, Redis, DynamoDB, MongoDB

Cloud Platforms: AWS, Google Cloud Platform, Kubernetes

Tools and Frameworks: Docker, Terraform, gRPC, REST APIs, Apache Kafka

Areas of Expertise: System Architecture, Database Optimization, Team Leadership, Code Review, Infrastructure as Code

WORK EXPERIENCE

Staff Engineer

FinScale Systems

www.finscale.io

Berlin, Germany

March 2021 - Present

Led the redesign of our core payment processing system, reducing transaction latency from 800ms to 150ms through database optimization and service partitioning

Established code review standards and architectural decision records that improved new engineer onboarding time by 6 weeks

Built and mentored a team of 5 engineers responsible for backend infrastructure, with 2 engineers promoted to senior roles during my tenure

Designed and implemented a multi-region disaster recovery solution that reduced recovery time objective from 4 hours to 15 minutes

Senior Software Engineer

CloudVenture GmbH

www.cloudventure.net

Berlin, Germany

June 2018 - February 2021

Architected a microservices migration from a monolithic Python application serving 10 million monthly users, coordinating across 4 teams over 18 months

Optimized PostgreSQL queries and implemented intelligent caching with Redis, improving API response times by 65 percent and reducing database load by 40 percent

Implemented comprehensive distributed tracing using Jaeger and Prometheus, enabling the team to identify and fix performance issues 3 times faster

Established on-call rotations and incident response procedures, reducing mean time to recovery from 2 hours to 25 minutes

Software Engineer

DataSync Systems

www.datasync-systems.com

Berlin, Germany

January 2015 - May 2018

Developed and maintained Go microservices handling data synchronization for enterprise clients, processing 2 billion records daily with 99.99 percent uptime

Built automated data pipeline orchestration using Apache Airflow and Kafka, reducing manual intervention by 70 percent

Contributed to open source projects including improvements to the Go standard library and Kubernetes networking components

Designed API gateway solution using gRPC that reduced network overhead by 35 percent compared to REST endpoints

EDUCATION

Diplom Informatik

Humboldt University of Berlin

Berlin, Germany

2010 - 2014

GITHUB REPOSITORIES

github.com/marcuswebr/go-cachestore

Distributed caching library in Go with consistent hashing and TTL support. 450 stars.

github.com/marcuswebr/postgres-query-analyzer

Tool for analyzing and optimizing slow PostgreSQL queries. 320 stars.

github.com/marcuswebr/k8s-network-policy-validator

Kubernetes admission webhook for validating network policies before deployment. 280 stars.

github.com/marcuswebr/terraform-aws-multi-region

Terraform modules for setting up multi-region AWS infrastructure with failover. 190 stars.
