PROFESSIONAL SUMMARY

Machine Learning Engineer with 7 years of experience building and deploying production ML systems at scale. I've spent the last four years focusing on computer vision and NLP applications, working with cross-functional teams to translate research into practical solutions. I'm most energized when solving complex data problems and mentoring junior engineers through their first production deployments.

WORK EXPERIENCE

Senior Machine Learning Engineer

DataVision Labs

Paris, France

www.datavision.io

March 2022 - Present

Designed and deployed computer vision pipeline processing 2 million images daily for quality control, reducing false positives by 38% through ensemble learning techniques.

Led a team of 3 ML engineers on natural language processing project for customer support automation, cutting response time from 4 hours to 12 minutes.

Implemented comprehensive A/B testing framework that identified a 15% performance improvement in recommendation model without impacting inference latency.

Mentored 4 junior engineers on production ML best practices, code review processes, and debugging distributed training systems on Kubernetes.

Machine Learning Engineer

NeuralStream Technologies

Lyon, France

www.neuralstream.net

July 2019 - February 2022

Developed and optimized deep learning models for time series forecasting in energy consumption prediction, achieving RMSE of 0.087 across 500+ customer sites.

Built data pipeline using Apache Spark and Delta Lake to process 50GB of daily data from IoT sensors, implementing data quality checks that caught 23% of anomalies before model inference.

Collaborated with product team to define success metrics and conducted 12+ experiments exploring different architectures, resulting in selection of hybrid LSTM-Transformer approach.

Created internal MLOps toolkit for model versioning and experiment tracking, enabling 8 data scientists to reduce model deployment time from 6 weeks to 10 days.

Machine Learning Engineer

Cognitive Insights Group

Paris, France

November 2017 - June 2019

Implemented classification models for document categorization using TensorFlow, achieving 94% accuracy on internal test set with 80,000+ labeled documents.

Developed Python feature engineering pipeline to extract 250+ features from raw text and structured data, working closely with data engineers to optimize computational efficiency.

Participated in quarterly model performance reviews and contributed to retraining schedule decisions that improved model freshness without excessive infrastructure costs.

Prepared technical documentation and conducted knowledge transfer sessions with stakeholder teams, ensuring non-technical staff understood model limitations and appropriate use cases.

EDUCATION

Master's Degree in Machine Learning and Artificial Intelligence

Université Pierre et Marie Curie (Sorbonne Université)

Paris, France

2015 - 2017

Bachelor's Degree in Mathematics and Computer Science

Université Claude Bernard Lyon 1

Lyon, France

2012 - 2015

TECHNICAL SKILLS

Programming Languages: Python, Java, SQL, Scala, R

Machine Learning Frameworks: TensorFlow, PyTorch, Scikit-learn, XGBoost, LightGBM

Data Processing: Apache Spark, Pandas, NumPy, Polars, SQL

Cloud Platforms: AWS (SageMaker, EC2, S3), Google Cloud Platform, Azure ML

MLOps and Deployment: Docker, Kubernetes, MLflow, Jenkins, Git

Specializations: Computer Vision, Natural Language Processing, Time Series Forecasting, Recommendation Systems, Transfer Learning

Databases: PostgreSQL, MongoDB, Elasticsearch, DynamoDB

GITHUB REPOSITORIES

github.com/laurentbeaumont/vision-quality-control - Computer vision pipeline for automated quality control using YOLO and ensemble methods

github.com/laurentbeaumont/nlp-support-classifier - Multi-label text classification system for customer support tickets with BERT fine-tuning

github.com/laurentbeaumont/timeseries-energy-forecasting - LSTM and Transformer based energy consumption forecasting with attention visualization

github.com/laurentbeaumont/feature-engineering-toolkit - Reusable Python library for automated feature extraction from time series data
