PROFESSIONAL SUMMARY

I'm a mid-level software engineer based in Berlin with 3 years of experience building web applications and backend systems. I started my career fixing bugs and writing tests, but gradually took on more complex features and system design responsibilities. I work best in collaborative teams where I can learn from others while contributing meaningful code. I'm particularly interested in performance optimization and writing maintainable code that other developers actually enjoy reading.

WORK EXPERIENCE

Software Engineer

TechVision Solutions GmbH

Berlin, Germany

January 2023 - Present

Developed and maintained microservices using Python and FastAPI that process user data for analytics dashboards, serving over 50,000 daily active users.

Implemented database query optimizations that reduced API response times by 35 percent, directly improving user experience in the main product.

Collaborated with product managers and designers to translate requirements into technical specifications and delivered features on schedule across 4 product iterations.

Mentored 2 junior developers by reviewing their code, conducting pair programming sessions, and helping them navigate technical challenges on their first major projects.

Backend Developer

DataFlow Berlin

dataf.io

Berlin, Germany

June 2021 - December 2022

Built REST APIs and data processing pipelines using Node.js and Express that handled integration with third-party payment systems and logging services.

Designed and implemented a caching layer using Redis that reduced database load by 45 percent during peak traffic periods.

Wrote comprehensive unit tests and integration tests achieving 82 percent code coverage, which caught multiple critical bugs before production deployment.

Participated in on-call rotation and resolved production incidents within 30 minutes on average, documenting post-mortems and implementing preventive measures.

Junior Software Engineer

CodeStream GmbH

codestream.net

Berlin, Germany

July 2020 - May 2021

Completed full-stack feature development in React and Node.js for a project management SaaS application used by 500 active customers.

Debugged and fixed issues reported by QA team and end users, improving application stability and reducing critical bugs by 40 percent.

Assisted in database schema design and wrote migration scripts using PostgreSQL, learning how to handle data integrity during schema updates.

Attended daily standups and weekly planning sessions, learning agile development practices and contributing to sprint planning discussions.

EDUCATION

Bachelor of Science in Computer Science

Technische Universität Berlin

Berlin, Germany

Graduated: June 2020

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, Node.js, SQL, HTML, CSS

Frameworks and Libraries: FastAPI, Express.js, React, Django

Databases: PostgreSQL, MongoDB, Redis

Tools and Platforms: Git, Docker, Docker Compose, AWS (EC2, S3, RDS)

Testing: Jest, Pytest, Mocha, Unit and Integration Testing

Other: REST APIs, Microservices Architecture, Linux, Agile Development

LANGUAGES

German (Native)

English (Fluent)
