PROFESSIONAL SUMMARY

I'm a Principal Engineer with ten years building scalable systems and leading technical teams across fintech and cloud infrastructure. I've spent the last six years working on distributed databases and microservices architecture, moving from hands-on development into mentoring and architectural decision-making. I genuinely enjoy solving difficult performance problems and helping junior engineers grow into stronger technical thinkers.

WORK EXPERIENCE

Principal Engineer

Velocity Systems AB

Stockholm, Sweden

velocity-systems.io

March 2022 - Present

Led the design and implementation of a distributed payment processing platform handling 2 million transactions daily across five Nordic countries. Mentored a team of eight engineers on system design principles and code review standards, resulting in improved pull request quality and faster onboarding. Architected migration from monolithic application to microservices, reducing deployment time from 45 minutes to 8 minutes and enabling independent team deployments. Established performance benchmarking framework that identified and eliminated three critical bottlenecks in transaction processing pipeline.

Senior Software Engineer

Nexus Data Solutions

Stockholm, Sweden

nexus-data.io

January 2019 - February 2022

Designed and built distributed time-series database handling 1 billion data points per day for real-time analytics platform serving 40 enterprise customers. Implemented comprehensive monitoring and alerting system using Prometheus and Grafana, reducing mean time to detection for incidents from 20 minutes to 3 minutes. Led database optimization project that reduced storage costs by 35 percent and improved query latency by 40 percent. Conducted technical interviews and mentored four junior developers, two of whom were promoted to mid-level positions.

Software Engineer

Catalyst Technologies

Stockholm, Sweden

catalyst.se

June 2014 - December 2018

Built backend services for mobile banking application used by 500,000 Swedish customers, focusing on API design and database optimization. Implemented automated testing framework that increased code coverage from 45 percent to 82 percent and reduced production bugs by half. Participated in on-call rotation supporting critical financial services, maintaining 99.95 percent uptime for core payment endpoints. Contributed to architectural

decisions that prepared the platform for handling ten times growth in user base.

EDUCATION

Master of Science in Computer Science

KTH Royal Institute of Technology

Stockholm, Sweden

Graduated June 2014

SKILLS

Programming Languages: Java, Python, Go, SQL, Bash

Distributed Systems: Microservices Architecture, System Design, Database Optimization, Message Queues

Cloud Platforms: AWS, Google Cloud Platform, Linux Administration

Technologies: Kubernetes, Docker, PostgreSQL, Apache Kafka, Elasticsearch, Redis, RabbitMQ

Monitoring and Observability: Prometheus, Grafana, ELK Stack, Datadog

Development Practices: CI/CD Pipelines, Git, Agile Methodologies, Technical Leadership, Mentoring
