PROFESSIONAL SUMMARY

Senior Machine Learning Engineer with 6 years of hands-on experience building and deploying production ML systems across fintech and e-commerce sectors. Specialized in computer vision and natural language processing, with a track record of reducing inference latency by up to 40% and improving model accuracy through careful data engineering. Passionate about mentoring junior team members and translating complex ML problems into practical business solutions.

WORK EXPERIENCE

Senior Machine Learning Engineer

TechVision Labs (www.techvisionlabs.io)

Lisbon, Portugal

March 2022 - Present

Designed and implemented an end-to-end computer vision pipeline for real-time document verification, reducing manual review time by 60% and improving fraud detection accuracy to 94.7%. Led a team of 3 junior engineers in developing and maintaining 12 ML models in production, providing weekly code reviews and mentoring on model optimization techniques. Architected a feature engineering framework using PySpark that reduced data processing time from 8 hours to 45 minutes for daily model retraining. Collaborated with product and business teams to define KPIs for model performance, translating technical metrics into business impact reports for executive stakeholders.

Machine Learning Engineer

DataFlow Solutions (www.dataflow.co)

Lisbon, Portugal

July 2020 - February 2022

Developed and deployed 8 machine learning models for customer churn prediction, recommendation systems, and demand forecasting, each serving 2+ million daily predictions. Implemented an automated ML monitoring system using Prometheus and Grafana that detected model drift and performance degradation, reducing undetected issues from weeks to hours. Optimized model inference latency by 35% through quantization and pruning techniques, enabling deployment on edge devices for mobile applications. Conducted extensive experimentation with deep learning architectures including LSTMs and Transformers, documenting findings in 15+ internal technical reports that influenced architecture decisions.

Machine Learning Engineer

InsightAI (www.insightai.net)

Lisbon, Portugal

August 2018 - June 2020

Built and validated natural language processing models for automated customer support ticket classification, achieving 89% accuracy and processing 50,000+ tickets monthly. Established data pipelines using Apache Airflow to collect, clean, and label training data from multiple sources, reducing manual data preparation overhead by 70%. Created visualization dashboards and trained 20+ non-technical stakeholders on interpreting model predictions and understanding limitations. Participated in 6 end-to-end ML projects from problem definition through production deployment, learning how to balance technical excellence with business timelines and resource

constraints.

EDUCATION

Master of Science in Artificial Intelligence and Advanced Computing

Instituto Superior Técnico, Universidade de Lisboa

Lisbon, Portugal

2016 - 2018

Bachelor of Science in Computer Science

Universidade do Porto

Porto, Portugal

2012 - 2016

TECHNICAL SKILLS

Machine Learning: TensorFlow, PyTorch, scikit-learn, XGBoost, LightGBM, computer vision, NLP, deep learning, neural networks, model optimization, model deployment

Data Engineering: Python, SQL, Apache Spark, Apache Airflow, pandas, NumPy, feature engineering

MLOps: Docker, Kubernetes, Jenkins, Git, model monitoring, model versioning, experiment tracking with MLflow

Cloud Platforms: AWS (SageMaker, EC2, S3), Google Cloud Platform (Vertex AI, BigQuery)

Databases: PostgreSQL, MongoDB, Redis, Elasticsearch

Other: Linux, REST APIs, Jupyter Notebooks, Tableau, statistical analysis, A/B testing, communication with non-technical teams
