PROFESSIONAL SUMMARY

I'm a DevOps engineer with a decade of experience building and maintaining infrastructure for high-traffic applications across Europe. I've spent the last five years focusing on Kubernetes orchestration and cloud cost optimization, helping teams move from traditional deployment models to fully automated CI/CD pipelines. I enjoy solving infrastructure problems that directly impact product delivery, and I'm particularly interested in observability and incident response automation.

WORK EXPERIENCE

Senior DevOps Engineer

TechVault Solutions

www.techvault.io

Amsterdam, Netherlands

March 2021 - Present

Designed and implemented a multi-region Kubernetes cluster supporting 150+ microservices with automatic failover and load balancing across AWS regions.

Reduced infrastructure costs by 35% through reserved instance optimization, spot instance integration, and containerization of legacy monolithic applications.

Built comprehensive monitoring and alerting infrastructure using Prometheus and Grafana, reducing mean time to detection for critical issues from 25 minutes to under 3 minutes.

Mentored a team of 5 junior engineers on container orchestration best practices, infrastructure as code principles, and incident response procedures.

DevOps Engineer

DataFlow Systems

www.dataflow.co

Amsterdam, Netherlands

January 2018 - February 2021

Migrated 80 applications from on-premise VMware infrastructure to AWS, resulting in 40% reduction in operational overhead and improved system reliability to 99.95% uptime.

Developed extensive Terraform modules and Ansible playbooks for infrastructure automation, eliminating manual server provisioning and reducing deployment time from 4 hours to 15 minutes.

Established GitOps workflows using ArgoCD for continuous deployment across staging and production environments with built-in rollback capabilities.

Implemented comprehensive disaster recovery procedures including automated backups, regular failover testing, and documented runbooks for 50+ critical systems.

Infrastructure Engineer

Nexus Digital

www.nexusdigital.net

Rotterdam, Netherlands

June 2014 - December 2017

Managed and optimized 200+ Linux servers running production workloads across multiple data centers with 99.8% uptime.

Designed and deployed centralized logging infrastructure using ELK stack, enabling development teams to diagnose issues without direct server access.

Automated routine maintenance tasks including patching, backups, and capacity monitoring using Bash and Python scripts, reducing manual operations by 60%.

Supported enterprise clients with infrastructure setup, performance tuning, and security hardening for their applications.

EDUCATION

Master of Science in Computer Science

University of Amsterdam

Amsterdam, Netherlands

Graduated: 2014

TECHNICAL SKILLS

Cloud Platforms: AWS, Azure, Google Cloud Platform

Container Orchestration: Kubernetes, Docker, Helm, Docker Compose

Infrastructure as Code: Terraform, Cloudformation, Ansible, Pulumi

CI/CD Tools: Jenkins, GitLab CI, GitHub Actions, ArgoCD

Monitoring and Observability: Prometheus, Grafana, ELK Stack, Datadog, New Relic

Programming Languages: Python, Bash, Go, Ruby

Databases: PostgreSQL, MySQL, Redis, MongoDB

Version Control: Git, GitLab, GitHub, Bitbucket

Linux: Ubuntu, CentOS, Debian system administration and optimization

Networking: VPC configuration, Load Balancing, DNS, SSL/TLS, VPN
