PROFESSIONAL SUMMARY

Data scientist based in Barcelona with 1 year of hands-on experience building machine learning models for real-world business problems. I started my career working with Python and SQL to analyze customer behavior patterns, and I've since developed a solid foundation in statistical analysis and data visualization. I'm particularly interested in recommendation systems and predictive analytics, and I'm actively contributing to open-source projects while continuously expanding my skills in deep learning frameworks.

WORK EXPERIENCE

Data Scientist

DataFlow Analytics

www.dataflowanalytics.io

Barcelona, Spain

June 2023 - Present

Built and deployed a customer churn prediction model using logistic regression and random forests, achieving 82% accuracy on test data and identifying 150+ at-risk customers for retention campaigns

Developed automated ETL pipelines using Python and Apache Airflow to process 2 million daily records from multiple data sources, reducing manual reporting time by 12 hours weekly

Created interactive Tableau dashboards tracking key business metrics for 8 departments, enabling data-driven decision making across the organization

Mentored 2 interns on SQL best practices and introduced them to machine learning fundamentals through weekly knowledge-sharing sessions

Junior Data Analyst

Retail Insights Spain

www.retailinsightsspain.net

Barcelona, Spain

January 2023 - May 2023

Analyzed sales data from 45 retail locations using SQL and Python to identify seasonal trends and regional performance variations

Performed exploratory data analysis on customer demographics resulting in 3 targeted marketing recommendations that increased conversion rates by 7%

Automated weekly sales report generation using Python scripts, eliminating 5 hours of manual work per week

Collaborated with marketing team to segment customers into 6 behavioral groups based on purchase history and RFM analysis

Data Analyst Intern

TechInsight Barcelona

www.techinsightbcn.co

Barcelona, Spain

September 2022 - December 2022

Cleaned and validated datasets containing 500,000+ records using pandas, identifying and correcting data quality issues affecting model accuracy

Created visualizations using matplotlib and seaborn to communicate findings from statistical analyses to non-technical stakeholders

Assisted in feature engineering for a classification model by creating 8 new variables from raw transaction data

Documented data processing procedures and created a reusable Python module for handling missing values in time-series data

EDUCATION

Bachelor of Science in Statistics

Universitat Autònoma de Barcelona

Barcelona, Spain

2019 - 2022

Relevant Coursework: Machine Learning, Statistical Inference, Data Mining, Time Series Analysis, Linear Regression, Data Visualization

TECHNICAL SKILLS

Programming Languages: Python, SQL, R

Data Analysis and Visualization: Pandas, NumPy, Matplotlib, Seaborn, Tableau

Machine Learning: Scikit-learn, Logistic Regression, Random Forests, Decision Trees, K-Means Clustering

Databases: PostgreSQL, MySQL, MongoDB basics

Tools and Platforms: Git, Jupyter Notebook, Apache Airflow, Google Colab

Statistics: Hypothesis Testing, A/B Testing, Exploratory Data Analysis, Descriptive Statistics

GITHUB REPOSITORIES

github.com/marctorres92/customer-churn-prediction - End-to-end classification project predicting customer churn with model comparison and hyperparameter tuning

github.com/marctorres92/retail-sales-analysis - Exploratory data analysis of retail transactions with visualization dashboard and seasonal decomposition

github.com/marctorres92/spanish-house-prices-ml - Linear regression model predicting house prices in Spain using public datasets with feature engineering

github.com/marctorres92/time-series-forecasting - ARIMA implementation for forecasting monthly sales with train-test split and performance evaluation

LANGUAGES

Spanish: Native

English: Professional Working Proficiency (B2)

Catalan: Limited Working Proficiency (A2)
