## PROFESSIONAL SUMMARY

---

I'm a BI Analyst with a decade of experience building data infrastructure and analytics solutions for mid-to-large organizations. My background spans data warehousing, reporting automation, and translating complex business requirements into actionable dashboards. I've led several end-to-end analytics projects in financial services and retail, always focusing on delivering solutions that actually get used by stakeholders rather than gathering dust.

## WORK EXPERIENCE

---

Staff BI Analyst

DataFlow Solutions Ltd

[www.dataflow-solutions.io](http://www.dataflow-solutions.io)

Bristol, United Kingdom

March 2021 - Present

Managed the complete analytics platform serving 40+ internal business users across finance, operations, and commercial teams, establishing governance frameworks that reduced report refresh failures from 15% to under 2%.

Designed and implemented a cloud-based data warehouse migration from on-premise SQL Server to Snowflake, coordinating across three departments and completing the project six weeks ahead of schedule with zero data loss.

Mentored four junior analysts in SQL optimization and Tableau development, creating standardized documentation that reduced onboarding time for new team members from four weeks to two weeks.

Architected a real-time sales performance dashboard integrated with Salesforce and NetSuite that consolidated data from previously siloed systems, enabling leadership to make daily decisions based on current data rather than weekly reports.

Senior BI Analyst

Brightwell Retail Group

[www.brightwellretail.co.uk](http://www.brightwellretail.co.uk)

Bristol, United Kingdom

July 2017 - February 2021

Owned the development and maintenance of 60+ analytical reports and dashboards supporting merchandising, supply chain, and store operations across 320 UK locations.

Built an automated inventory forecasting model using Python and historical sales data that improved stock accuracy by 12% and reduced holding costs by GBP 1.8 million annually.

Established a metrics governance process involving stakeholder interviews and data audits, resolving disputes over KPI definitions that had previously caused conflicting reporting across departments.

Redesigned the month-end reporting cycle by automating 35 hours of manual data consolidation work through SSIS packages and VBA macros, freeing the team to focus on analytics rather than data processing.

BI Analyst

Insight Analytics Partners

[www.insightanalytics.net](http://www.insightanalytics.net)

Manchester, United Kingdom

August 2014 - June 2017

Developed ETL processes and data models in SQL Server supporting financial services clients across regulatory reporting, risk analysis, and customer analytics.

Created interactive Power BI reports and dashboards for executive leadership on operational metrics, financial performance, and market trends, presented insights in monthly steering committee meetings.

Wrote technical documentation and created training materials for client-facing analytics implementations, ensuring successful adoption and reducing support tickets by 40%.

Collaborated with business analysts and developers to gather requirements, translate business logic into data specifications, and validate outputs against source systems.

## EDUCATION

---

Bachelor of Science in Business Information Systems

University of Bristol

Bristol, United Kingdom

2010 - 2014

## TECHNICAL SKILLS

---

Data Warehousing: Snowflake, SQL Server, PostgreSQL

ETL Tools: SSIS, Talend, custom Python scripts

BI Visualization: Tableau, Power BI, Looker

Programming Languages: SQL, Python, VBA

Cloud Platforms: AWS (S3, Redshift), Azure

Databases: T-SQL, relational database design

Data Modeling: dimensional modeling, fact and dimension tables

Version Control: Git, GitHub basics
