PROFESSIONAL SUMMARY

Full Stack Engineer with 2 years of hands-on experience building web applications using React and Node.js. I started my career fixing bugs in legacy systems and gradually took on more complex features, learning a lot through doing rather than just reading documentation. I enjoy working with teams that value clear communication and aren't afraid to admit when something isn't working. Currently looking to expand my knowledge of cloud infrastructure and database optimization.

WORK EXPERIENCE

Junior Full Stack Developer

TechVision Solutions

teckvision.io

Glasgow, United Kingdom

June 2023 - Present

Developed and maintained 5 internal React components used across 3 different client projects, reducing code duplication by approximately 40% through reusable component patterns.

Built REST APIs using Node.js and Express that handle over 10,000 daily requests, implementing proper error handling and validation to ensure data integrity.

Collaborated with 2 senior developers and 1 QA tester to ship a complete customer dashboard feature from design mockups to production in 8 weeks.

Spent time refactoring legacy jQuery code to modern React, which improved page load times by 25% and made the codebase easier for new team members to understand.

Full Stack Developer Intern

DataFlow Systems

dataflow.co.uk

Edinburgh, United Kingdom

January 2023 - May 2023

Assisted in building a real-time inventory management system using React on the frontend and Python with Flask on the backend, supporting 15 warehouse locations.

Wrote unit tests using Jest and implemented automated testing in the CI/CD pipeline, catching approximately 30% more bugs before production deployment.

Participated in daily stand-ups and weekly code reviews, receiving constructive feedback that improved my code quality and understanding of best practices.

Debugged and resolved 12 production issues reported by end users, learning how to read error logs and trace problems through multiple layers of the application stack.

Software Developer (Contract)

DigitalHub Ltd

digitalhub.net

Glasgow, United Kingdom

September 2022 - December 2022

Completed 3-month contract role building features for a SaaS platform managing over 500 active clients, writing both backend API endpoints and frontend interfaces.

Fixed 8 critical bugs in the authentication system, improving the login success rate from 94% to 99.2% and reducing support ticket volume.

Created technical documentation for 6 new API endpoints, making it easier for other developers to integrate with the system without constant questions.

Learned Docker and containerization concepts while helping deploy application updates to staging and production environments.

EDUCATION

Bachelor of Science in Computer Science

University of Glasgow

Glasgow, United Kingdom

Graduated: June 2022

TECHNICAL SKILLS

Languages: JavaScript, Python, HTML5, CSS3, SQL

Frontend: React, Redux, Material-UI, Bootstrap, Responsive Design

Backend: Node.js, Express, Flask, RESTful APIs

Databases: PostgreSQL, MongoDB, MySQL

Tools and Platforms: Git, GitHub, Docker, AWS (EC2, S3), Jira, Jenkins

Testing: Jest, React Testing Library, Postman

Other: Git version control, Linux command line, Agile methodologies, npm, Webpack
