PROFESSIONAL SUMMARY

I'm a Junior DevOps Engineer based in Liverpool with 2 years of hands-on experience building and maintaining cloud infrastructure. I started my career wanting to understand how applications actually run in production, and I've spent the last two years learning containerization, infrastructure automation, and monitoring systems. I'm comfortable with Linux, Docker, and AWS, and I genuinely enjoy solving deployment problems and making systems more reliable.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, S3, RDS, CloudFormation, Lambda), Digital Ocean

Containerization: Docker, Docker Compose

Orchestration: Kubernetes (basic knowledge)

Infrastructure as Code: Terraform, CloudFormation

Configuration Management: Ansible

CI/CD Pipelines: Jenkins, GitLab CI, GitHub Actions

Version Control: Git, GitHub, GitLab

Monitoring and Logging: Prometheus, Grafana, ELK Stack, CloudWatch

Scripting: Bash, Python

Web Servers: Nginx, Apache

Databases: PostgreSQL, MySQL

Operating Systems: Ubuntu, CentOS, Amazon Linux

WORK EXPERIENCE

DevOps Engineer

TechServe Solutions Ltd

Liverpool, United Kingdom

www.techservesolutions.co.uk

January 2023 - Present

Deployed and maintained containerized applications using Docker and Docker Compose across multiple environments, reducing deployment time by approximately 40 percent through automation of manual processes.

Built and managed CI/CD pipelines using GitLab CI, enabling developers to deploy code changes multiple times per day with confidence in automated testing and validation.

Implemented infrastructure monitoring using Prometheus and Grafana, creating dashboards that track system performance and alert the team to issues before they impact users.

Documented infrastructure setup and deployment procedures for the team, ensuring knowledge wasn't held by a single person and making onboarding smoother for new engineers.

Junior DevOps Engineer

Cloudwise Technologies

Liverpool, United Kingdom

www.cloudwise.io

August 2021 - December 2022

Managed AWS infrastructure including EC2 instances, RDS databases, and S3 buckets for multiple client applications, maintaining uptime and ensuring cost optimization across accounts.

Wrote Terraform configurations to automate the provisioning of cloud resources, reducing manual setup time and ensuring consistent infrastructure across development and production environments.

Assisted in implementing an ELK Stack for centralized logging across applications, making it significantly easier for the team to troubleshoot production issues and track application behavior.

Performed regular backups and disaster recovery testing for critical databases, ensuring data could be recovered within acceptable timeframes if something went wrong.

Systems Administrator

Murphy IT Services

Liverpool, United Kingdom

June 2020 - July 2021

Managed Linux servers running web applications and databases for small to medium-sized businesses, handling everything from patching to user access management.

Set up monitoring and alerting using open-source tools, ensuring the team was notified promptly when servers experienced performance issues or resource constraints.

Automated routine server maintenance tasks using Bash scripts, reducing the time spent on repetitive administrative work and minimizing human error.

Provided technical support to junior staff members and documented common troubleshooting procedures to improve team efficiency and consistency.

EDUCATION

Bachelor of Science in Computer Science

University of Liverpool

Liverpool, United Kingdom

Graduated: June 2020

Relevant Coursework: Systems Administration, Computer Networks, Database Management, Software Engineering

GITHUB REPOSITORIES

<https://github.com/jamespatterson/terraform-aws-infrastructure>

Terraform configuration templates for provisioning common AWS resources. Includes modules for VPCs, security groups, and RDS instances. Used in production environments.

<https://github.com/jamespatterson/docker-app-stack>

Docker Compose configuration for a multi-container application stack including Node.js app, PostgreSQL, and Nginx reverse proxy. Good reference for local development setup.

<https://github.com/jamespatterson/ansible-server-config>

Ansible playbooks for configuring Ubuntu servers with common tools, security hardening, and monitoring agents. Covers firewall setup and system updates.

<https://github.com/jamespatterson/bash-deployment-scripts>

Collection of Bash scripts for automating common deployment tasks including database backups, log rotation, and application restarts.

CERTIFICATIONS

AWS Certified Cloud Practitioner - Amazon Web Services (2022)
