Amsterdam, Netherlands

PROFESSIONAL SUMMARY

I'm a backend engineer with 6 years of experience building scalable systems and leading technical decisions on distributed platforms. I've spent the last 4 years working with microservices architectures and high-traffic applications, focusing on reliability and performance optimization. I enjoy mentoring junior developers and writing code that's straightforward to maintain.

WORK EXPERIENCE

Senior Backend Engineer

Dataflux Systems

dataflux.io

Amsterdam, Netherlands

March 2022 - Present

Designed and implemented a new event streaming pipeline that reduced data processing latency by 65% for our analytics platform serving 2 million daily users.

Led the migration of a monolithic payment service to microservices, introducing message queues and improving transaction throughput from 500 to 3200 requests per second.

Established code review standards and automated testing practices across a team of 5 backend engineers, reducing production incidents by 40%.

Mentored 3 junior developers on system design principles and helped them complete major feature implementations independently.

Backend Engineer

CloudTech Solutions

cloudtech.co.net

Amsterdam, Netherlands

July 2020 - February 2022

Built and maintained RESTful APIs handling 10 million requests daily using Python and PostgreSQL, managing database optimization and query tuning.

Implemented Redis caching layer for session management and frequently accessed data, reducing database load by 35%.

Collaborated with DevOps team to containerize applications using Docker and deploy to Kubernetes clusters across staging and production environments.

Debugged and resolved critical production issues affecting customer billing systems, maintaining 99.8% uptime.

Junior Backend Developer

TechVenture Amsterdam

techventure.io

Amsterdam, Netherlands

June 2018 - June 2020

Developed and deployed backend services using Node.js and Express, contributing to core features of a SaaS platform for e-commerce companies.

Wrote comprehensive unit and integration tests achieving 82% code coverage, catching bugs before production deployment.

Assisted in database schema design and created migration scripts for PostgreSQL to support new features.

Participated in on-call rotation and handled incident response, learning production debugging and system monitoring practices.

EDUCATION

Bachelor of Science in Computer Science

University of Amsterdam

Amsterdam, Netherlands

Graduated: June 2018

TECHNICAL SKILLS

Languages: Python, JavaScript, Go, SQL

Frameworks and Libraries: Django, Flask, Express.js, FastAPI

Databases: PostgreSQL, Redis, MongoDB, Cassandra

Infrastructure: Docker, Kubernetes, AWS (EC2, RDS, S3), Linux

Message Queues: RabbitMQ, Apache Kafka

APIs and Protocols: REST, gRPC, HTTP/2

Version Control: Git, GitHub, GitLab

Development Tools: Jira, DataDog, Prometheus, ELK Stack
