PROFESSIONAL SUMMARY

I'm a frontend engineer with 12 years building user interfaces for web applications, from early-stage startups to established product companies. I've spent the last four years leading frontend architecture decisions and mentoring junior developers on my teams. I care deeply about writing maintainable code and creating interfaces that users actually enjoy using, and I'm particularly interested in performance optimization and accessible design patterns.

WORK EXPERIENCE

Staff Frontend Engineer

TechFlow Solutions

techflow.io

Berlin, Germany

March 2021 - Present

Led the frontend architecture migration from a monolithic React application to a modular component system used by 15 developers across three teams. Implemented a comprehensive design system with 120 reusable components that reduced design-to-development time by 40 percent. Established code review standards and mentored 4 junior engineers to senior level positions through structured feedback and pair programming sessions. Reduced bundle size from 850KB to 420KB through webpack optimization and lazy loading strategies, improving lighthouse scores from 65 to 92.

Senior Frontend Engineer

PixelWorks GmbH

pixelworks.net

Berlin, Germany

June 2018 - February 2021

Owned the frontend layer for a real-time data visualization platform serving 200 enterprise clients with millions of monthly active users. Built custom SVG and Canvas rendering engines to handle complex graphical data without performance degradation on lower-end devices. Introduced TypeScript across the codebase of 80,000 lines, establishing strict typing standards that reduced runtime errors by 65 percent. Established weekly frontend guild meetings where engineers discussed technical challenges and shared knowledge across the organization.

Frontend Engineer

Digital Wave AG

digitalwave.co

Hamburg, Germany

July 2012 - May 2018

Developed responsive web interfaces for a suite of B2B SaaS products using jQuery, Angular, and later React across multiple project cycles. Implemented automated testing infrastructure with Jest and React Testing Library, growing test coverage from 15 percent to 82 percent over two years. Collaborated with product managers and UX designers to translate wireframes into pixel-perfect implementations that matched design specifications. Mentored

2 frontend interns and helped establish frontend best practices documentation that became the foundation for all future projects.

EDUCATION

Diplom Informatik (Diploma in Computer Science)

Freie Universität Berlin

Berlin, Germany

Graduated 2012

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, HTML, CSS, SCSS

Frontend Frameworks: React, Vue.js, Angular

State Management: Redux, Zustand, Context API

Build Tools: Webpack, Vite, Babel, npm, yarn

Testing: Jest, React Testing Library, Cypress, Playwright

Performance: Web Vitals optimization, bundle analysis, lazy loading, code splitting

Accessibility: WCAG 2.1, semantic HTML, screen reader testing, keyboard navigation

Design Tools: Figma, Adobe XD

Version Control: Git, GitHub, GitLab

Other: REST APIs, GraphQL, responsive design, cross-browser compatibility, web performance monitoring
