PROFESSIONAL SUMMARY

Staff Engineer with 12 years of backend and infrastructure experience, currently based in Madrid. I've spent the last 8 years building distributed systems at scale and mentoring engineering teams through complex technical challenges. I'm most interested in solving reliability problems and improving how teams collaborate on large codebases. My work has focused on reducing operational overhead and helping engineers move faster without sacrificing stability.

WORK EXPERIENCE

Senior Staff Engineer

TechVault Solutions

techvault.io

Madrid, Spain

March 2021 - Present

Led the redesign of our microservices architecture, reducing deployment time from 45 minutes to 8 minutes through improved CI/CD pipelines and service decoupling strategies.

Mentored a team of 6 junior and mid-level engineers, conducting weekly technical reviews and helping them navigate complex system design decisions on production systems.

Implemented comprehensive observability infrastructure using Prometheus, Grafana, and distributed tracing, which reduced mean time to resolution for incidents by 60%.

Architected and deployed a Kubernetes migration strategy for 40 legacy services, planning the phased rollout over 18 months while maintaining zero downtime for customer-facing applications.

Principal Engineer

DataFlow Systems

dataflowsystems.net

Madrid, Spain

June 2018 - February 2021

Designed and built a real-time data processing platform handling 500 million events daily, using Apache Kafka and Spark, serving analytics and machine learning teams across the organization.

Established coding standards and architectural guidelines for the infrastructure team, reducing code review cycles by 40% and improving system consistency across services.

Led incident response for critical production outages, implementing post-mortem processes and preventing recurrence of high-impact issues through systematic root cause analysis.

Managed the migration from monolithic PostgreSQL architecture to a sharded distributed database system, maintaining data consistency and improving query performance by 3x.

Senior Engineer

CloudNative Corp

www.cloudnativecorp.com

Madrid, Spain

July 2012 - May 2018

Developed and maintained Java backend services handling payment processing for 200+ enterprise clients, ensuring 99.99% uptime and processing 2 million transactions daily.

Led the adoption of Docker and containerization practices across the engineering organization, reducing environment inconsistencies and improving local development setup time from hours to minutes.

Built monitoring and alerting systems that decreased false positives by 70%, allowing on-call engineers to focus on genuine issues and reducing alert fatigue.

Collaborated with frontend and mobile teams to design REST APIs and define service contracts, improving integration efficiency and reducing cross-team communication overhead.

EDUCATION

Master of Science in Computer Science

Universidad Politecnica de Madrid

Madrid, Spain

2010 - 2012

Bachelor of Science in Computer Science

Universidad Autonoma de Madrid

Madrid, Spain

2006 - 2010

TECHNICAL SKILLS

Languages: Java, Python, Go, SQL, Bash

Platforms and Frameworks: Spring Boot, Apache Kafka, Apache Spark, Kubernetes, Docker

Databases: PostgreSQL, MySQL, Redis, Elasticsearch

Cloud and Infrastructure: AWS (EC2, RDS, S3, Lambda), Linux, Terraform, Docker Swarm

DevOps and Tools: Jenkins, GitLab CI, Prometheus, Grafana, Jaeger, ELK Stack

Methodologies: Microservices Architecture, Distributed Systems, System Design, Incident Management, Mentoring
