PROFESSIONAL SUMMARY

I'm a Barcelona-based data engineer with 8 years of hands-on experience building scalable data pipelines and warehouses. I've worked across healthcare, fintech, and e-commerce sectors, designing systems that process terabytes of data daily. I'm comfortable moving between infrastructure work and data modeling, and I enjoy mentoring junior engineers while keeping my technical skills current.

WORK EXPERIENCE

Senior Data Engineer

DataVault Systems

Barcelona, Spain

January 2022 - Present

www.datavault.io

Led the redesign of our main ETL pipeline, reducing processing time by 65 percent and cutting infrastructure costs by 40 percent. Implemented a data governance framework that brought compliance across 12 different data sources used by product and analytics teams. Mentored three junior data engineers on best practices for schema design and managed the transition from Airflow 1.x to 2.x across our entire platform. Built self-service analytics infrastructure allowing non-technical stakeholders to query petabyte-scale datasets without engineering involvement.

Data Engineer

FinFlow Analytics

Barcelona, Spain

March 2019 - December 2021

www.finflow.co

Architected data warehouse on Snowflake handling 500GB daily ingestion from 40+ payment and transaction APIs. Designed and maintained dbt transformation models used by 30+ analysts, establishing code review standards that reduced production incidents by 75 percent. Developed Python-based monitoring and alerting system that caught data quality issues before they impacted downstream dashboards. Collaborated with platform engineering to containerize all data jobs using Docker and Kubernetes, enabling auto-scaling during high-load periods.

Data Engineer

HealthInsight Madrid

Madrid, Spain

June 2017 - February 2019

www.healthinsight.net

Built initial data lake infrastructure processing healthcare claims data from 8 regional insurance providers. Wrote custom PySpark jobs to normalize heterogeneous data formats and created dimensional models for claims

analysis. Implemented automated testing and data validation pipelines that prevented corrupt records from reaching production. Documented data lineage and created internal wiki that became the reference guide for 50+ data users across the organization.

EDUCATION

Degree in Computer Science

Universitat Autònoma de Barcelona

Barcelona, Spain

2013 - 2017

TECHNICAL SKILLS

Languages: Python, SQL, Java, Bash

Data Technologies: Apache Spark, Airflow, dbt, Snowflake, PostgreSQL, Kafka, Elasticsearch

Infrastructure: Docker, Kubernetes, AWS (S3, EC2, RDS, Lambda), Terraform

Tools and Platforms: Git, Tableau, Grafana, Great Expectations, DBT Cloud

Specializations: ETL pipeline design, data warehouse architecture, data quality frameworks, dimensional modeling
