PROFESSIONAL SUMMARY

I'm a Staff Engineer with 10 years of experience building scalable backend systems and leading technical initiatives in fast-growing companies. I've spent the last six years focused on distributed systems architecture, mentoring junior engineers, and reducing operational complexity through thoughtful design decisions. I particularly enjoy working on problems where performance and reliability directly impact user experience, and I'm most productive when collaborating with teams that value clear thinking and pragmatic solutions.

WORK EXPERIENCE

Staff Engineer

Tessera Systems

tessera.io

Birmingham, United Kingdom

March 2021 - Present

Designed and implemented a new microservices architecture that reduced system latency by 40 percent and improved deployment frequency from weekly to daily releases. Led the migration of a monolithic payment processing system serving 2 million users, coordinating across five teams while maintaining zero downtime throughout the transition. Established engineering standards for code review, testing practices, and documentation that were adopted across the entire 30-person engineering department. Mentored four junior engineers through promotion cycles, providing hands-on guidance on system design, code quality, and career development.

Senior Software Engineer

Nexus Data Solutions

nexusdata.co.uk

Birmingham, United Kingdom

June 2018 - February 2021

Built a real-time data pipeline processing 500 million events daily using Kafka and Apache Flink, enabling the analytics team to deliver reports with sub-minute latency instead of daily batch jobs. Improved database query performance by 60 percent through indexing strategy changes and query optimization, eliminating the need for additional infrastructure investment. Developed internal tooling and frameworks that reduced the time to deploy new microservices from three weeks to two days, accelerating feature delivery across the company. Conducted comprehensive security audit of our AWS infrastructure and implemented infrastructure-as-code practices that eliminated manual configuration drift.

Software Engineer

Prism Technology Group

prismtech.net

London, United Kingdom

July 2014 - May 2018

Developed backend services for a SaaS platform serving enterprise customers, handling authentication, authorization, and user management for 50,000 concurrent users. Owned the database layer and implemented connection pooling and caching strategies that reduced API response times from 800ms to 120ms. Built automated testing infrastructure that increased code coverage from 45 percent to 82 percent, significantly reducing production incidents. Participated in on-call rotation and resolved critical incidents affecting customer operations, implementing post-incident reviews and permanent fixes to prevent recurrence.

EDUCATION

University of Birmingham

Bachelor of Science in Computer Science

Birmingham, United Kingdom

Graduated: June 2014

TECHNICAL SKILLS

Languages: Python, Go, Java, SQL, Bash

Platforms and Tools: AWS, Kubernetes, Docker, Apache Kafka, PostgreSQL, Redis, Elasticsearch, Terraform, Git, Jenkins, Grafana, Prometheus

Specializations: Distributed Systems, Microservices Architecture, System Design, Performance Optimization, Database Design, Infrastructure as Code

Other: RESTful API Design, Event-Driven Architecture, CI/CD Pipeline Development, Load Testing, Capacity Planning

GITHUB REPOSITORIES

github.com/jarthurfletcher/distributed-cache - Go implementation of a distributed in-memory cache with consistent hashing and replication, supporting 100k operations per second

github.com/jarthurfletcher/kafka-consumer-framework - Python framework abstracting common patterns for building Kafka consumers, used internally by three teams

github.com/jarthurfletcher/postgres-migration-tool - Database migration management tool in Python with rollback capabilities and dry-run validation

github.com/jarthurfletcher/api-gateway-patterns - Collection of documented patterns and implementations for API gateway design in Go
