PROFESSIONAL SUMMARY

I'm a data scientist based in Lisbon with one year of experience building machine learning models and analyzing datasets for business problems. I started my career at a fintech startup where I worked on customer churn prediction, then moved to a digital agency handling recommendation systems. I'm particularly interested in time series forecasting and natural language processing, and I enjoy writing clean Python code that others can actually understand.

WORK EXPERIENCE

Machine Learning Engineer

DataFlow Analytics

www.dataflow-analytics.io

Lisbon, Portugal

August 2023 - Present

Developed and deployed a customer segmentation model using K-means clustering that identified four distinct user personas, enabling the marketing team to improve campaign targeting by 23 percent

Built an automated data pipeline in Python that processes 2 million daily events from product tracking, reducing manual reporting time from 8 hours to 15 minutes per week

Created interactive dashboards in Tableau to visualize model performance metrics and business KPIs for stakeholder presentations

Implemented feature engineering workflows using pandas and scikit-learn, increasing model accuracy by 8 percent on churn prediction tasks

Data Scientist Intern

FinHub Solutions

www.finhub.co

Lisbon, Portugal

March 2023 - July 2023

Analyzed transaction patterns across 50,000 customers to identify fraud indicators, contributing to a model that flagged suspicious activity with 92 percent precision

Performed exploratory data analysis on historical credit card data using Python, SQL, and Jupyter notebooks to understand spending trends by demographic groups

Collaborated with backend engineers to validate model outputs and ensure predictions integrated smoothly into production systems

Documented data preprocessing steps and assumptions in technical reports for knowledge transfer to the data engineering team

Junior Data Analyst

Creative Minds Agency

www.creativeminds.net

Lisbon, Portugal

September 2022 - February 2023

Extracted and transformed raw client campaign data from multiple sources using SQL queries and Python scripts to prepare datasets for analysis

Generated weekly performance reports analyzing engagement metrics, click-through rates, and conversion funnels for 15 active client accounts

Performed statistical tests to evaluate whether campaign variations had significant impacts on user behavior

Created visualizations and summary tables in Excel to communicate findings to non-technical stakeholders and campaign managers

EDUCATION

Bachelor of Science in Data Science

Instituto Superior Técnico, Universidade de Lisboa

Lisbon, Portugal

2019 - 2022

TECHNICAL SKILLS

Programming Languages: Python, SQL, R

Machine Learning: scikit-learn, XGBoost, linear regression, logistic regression, K-means clustering, decision trees

Data Analysis: pandas, NumPy, Jupyter notebooks, exploratory data analysis

Data Visualization: Tableau, Matplotlib, Seaborn

Databases: PostgreSQL, MySQL

Tools and Platforms: Git, AWS S3, Google Sheets, Excel

PUBLIC REPOSITORIES

github.com/joaomartins-ds/churn-prediction-model

Machine learning pipeline for predicting customer churn using gradient boosting with feature importance analysis and cross-validation

github.com/joaomartins-ds/ecommerce-analysis

Exploratory data analysis of an e-commerce dataset including customer segmentation and RFM analysis with Matplotlib visualizations

github.com/joaomartins-ds/credit-risk-classifier

Binary classification model comparing multiple algorithms to predict loan default risk with ROC-AUC and confusion matrix evaluation

github.com/joaomartins-ds/time-series-forecasting

ARIMA and exponential smoothing models for forecasting monthly sales data with error metrics and residual diagnostics

LANGUAGES

Portuguese: Native

English: Fluent

Spanish: Intermediate
