PROFESSIONAL SUMMARY

Senior DevOps Engineer with 8 years of hands-on experience building and maintaining scalable infrastructure across startups and enterprise environments. I've spent the last five years moving from traditional ops into fully automated CI/CD pipelines and cloud-native architectures. I work best when solving problems that involve infrastructure as code, container orchestration, and improving deployment reliability. My approach combines technical depth with a genuine interest in making development teams' lives easier through better tooling and processes.

WORK EXPERIENCE

Senior DevOps Engineer

TechFlow Solutions

techflow.io

Lisbon, Portugal

March 2022 - Present

Designed and implemented a multi-region Kubernetes infrastructure serving 50+ microservices with automated scaling that reduced infrastructure costs by 35 percent over 18 months.

Built a comprehensive GitOps pipeline using ArgoCD and Helm that enabled development teams to deploy without DevOps involvement, reducing deployment cycle time from 45 minutes to 8 minutes.

Established infrastructure as code practices across the organization using Terraform, managing AWS resources for 12 development teams and maintaining version control for all infrastructure changes.

Led the migration of legacy applications from virtual machines to containerized workloads, completing 28 service migrations while maintaining zero downtime during transition periods.

DevOps Engineer

CloudBase Systems

cloudbase.net

Porto, Portugal

June 2019 - February 2022

Managed AWS infrastructure supporting 20 million monthly requests, implementing auto-scaling policies and load balancing configurations that maintained 99.95 percent uptime consistently.

Developed and maintained Jenkins CI/CD pipelines for 15 development teams, creating reusable pipeline templates that reduced build configuration time by 60 percent.

Implemented comprehensive monitoring and alerting using Prometheus and Grafana, creating dashboards that reduced mean time to detection for production issues from 25 minutes to 3 minutes.

Automated server provisioning and configuration management using Ansible, reducing new environment setup time from 6 hours to 12 minutes.

DevOps Engineer

DataSync Innovations

datasync.co

Lisbon, Portugal

July 2016 - May 2019

Established Docker containerization standards and created base images for the engineering organization, reducing local development environment setup time from 2 hours to 10 minutes.

Migrated applications from on-premises data centers to AWS, planning and executing transition for 8 production systems affecting 500 concurrent users with zero data loss.

Built and maintained internal deployment platform using Jenkins and custom scripts, enabling non-ops engineers to deploy applications independently.

Implemented infrastructure monitoring and logging using ELK stack and StatsD, providing real-time visibility into application and infrastructure performance.

EDUCATION

Bachelor of Engineering in Computer Science

Instituto Superior Tecnico

Universidade de Lisboa

Completed: 2016

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, RDS, S3, CloudFormation, VPC), Azure, GCP basics

Containerization: Docker, Kubernetes, Helm, Docker Compose

Infrastructure as Code: Terraform, CloudFormation, Ansible

CI/CD Tools: Jenkins, GitLab CI, GitHub Actions, ArgoCD

Scripting Languages: Bash, Python, Go basics

Monitoring and Logging: Prometheus, Grafana, ELK Stack, CloudWatch, DataDog

Version Control: Git, GitHub, GitLab

Databases: PostgreSQL, MySQL, Redis

Operating Systems: Linux (CentOS, Ubuntu, Amazon Linux), macOS

Container Registries: Docker Hub, ECR, private registries

Additional: VirtualBox, Vagrant, Apache, Nginx, SSL/TLS certificates

GitHub Public Repositories

kubernetes-deployment-automation - Helm charts and Kubernetes manifests for multi-environment deployments with automated testing and validation pipelines.

terraform-aws-multi-region - Reusable Terraform modules for AWS infrastructure deployment including networking, compute, and database resources.

cicd-pipeline-templates - Collection of Jenkins and GitLab CI pipeline templates used for deploying microservices with security scanning and artifact management.

infrastructure-as-code-examples - Educational repository containing practical examples of IaC practices with Terraform, Ansible, and CloudFormation.
