PROFESSIONAL SUMMARY

I'm a Machine Learning Engineer with two years of hands-on experience building predictive models and data pipelines for real-world applications. I started my career working with Python and scikit-learn before moving into deep learning frameworks like TensorFlow and PyTorch. I'm particularly interested in computer vision and natural language processing, and I'm always looking to deepen my understanding of model optimization and deployment strategies.

WORK EXPERIENCE

Machine Learning Engineer

DataVision Labs

<https://datavision.io>

Leeds, United Kingdom

June 2023 - Present

Developed and trained convolutional neural networks for image classification tasks, achieving 94% accuracy on a custom dataset of industrial equipment photographs. Implemented data preprocessing pipelines using Python and pandas to clean and augment training datasets from multiple sources. Collaborated with the product team to evaluate model performance metrics and identify areas for improvement in production systems. Deployed a PyTorch-based model to AWS Lambda for real-time inference, reducing prediction latency from 2 seconds to 300 milliseconds.

Junior Machine Learning Engineer

InsightAI Solutions

<https://insightai.net>

Manchester, United Kingdom

January 2023 - May 2023

Built machine learning models using scikit-learn and XGBoost to predict customer churn for a telecommunications client, improving retention targeting accuracy by 12%. Created automated data validation scripts to catch data quality issues before model training, reducing debugging time by approximately 40 hours per month. Collaborated with senior engineers to implement cross-validation techniques and hyperparameter tuning strategies across multiple projects. Documented model architectures and training procedures to help the team understand and reproduce results consistently.

Data Science Intern

Quantify Analytics

<https://quantify.co>

Leeds, United Kingdom

July 2022 - December 2022

Assisted in developing exploratory data analysis notebooks for financial datasets containing over 5 million records using Jupyter, pandas, and Matplotlib. Cleaned and preprocessed raw data from various APIs and databases, preparing datasets for machine learning model training. Supported senior analysts with feature engineering tasks,

creating new variables that improved model performance by 7%. Participated in weekly team meetings to discuss project progress and learned best practices for version control using Git and collaboration workflows.

EDUCATION

Bachelor of Science in Computer Science

University of Leeds

Leeds, United Kingdom

Graduated: June 2022

SKILLS

Programming Languages: Python, SQL, R

Machine Learning Frameworks: TensorFlow, PyTorch, scikit-learn, XGBoost

Data Processing: pandas, NumPy, Apache Spark

Data Visualization: Matplotlib, Seaborn, Plotly

Cloud Platforms: AWS, Google Cloud Platform

Tools and Technologies: Jupyter Notebook, Git, Docker, Linux

Machine Learning Specializations: Computer Vision, Natural Language Processing, Classification, Regression

Databases: PostgreSQL, MySQL, MongoDB
