PROFESSIONAL SUMMARY

I'm a Principal Engineer with seven years of hands-on experience building scalable backend systems and leading technical initiatives across distributed teams. I've spent most of my career working with microservices, cloud infrastructure, and DevOps tooling, primarily in fintech environments. I'm comfortable switching between strategic thinking and getting deep into infrastructure problems, and I genuinely enjoy mentoring engineers at all levels to help them grow their technical skills.

TECHNICAL SKILLS

Backend Development: Java, Go, Python, TypeScript

Cloud Platforms: AWS (EC2, S3, RDS, Lambda), Google Cloud Platform, Azure

Containerization: Docker, Kubernetes, Helm

Databases: PostgreSQL, MySQL, MongoDB, Redis

Message Queues: RabbitMQ, Kafka, SQS

Infrastructure as Code: Terraform, CloudFormation

CI/CD: Jenkins, GitLab CI, GitHub Actions

Monitoring and Logging: Prometheus, ELK Stack, Datadog

Version Control: Git, GitHub, GitLab

Agile Methodologies: Scrum, Kanban

WORK EXPERIENCE

Principal Engineer

TechVenture Solutions

Dublin, Ireland

www.techventure.io

January 2023 - Present

Led the architecture and implementation of a multi-tenant SaaS platform serving over 150 enterprise customers, resulting in 40 percent improvement in system reliability.

Established engineering standards and code review practices across a team of eight engineers, reducing critical production incidents by 60 percent.

Designed and deployed a Kubernetes-based infrastructure that reduced deployment time from 45 minutes to 8 minutes and improved resource utilization by 35 percent.

Mentored four junior engineers through technical challenges and career development, with two promoted to senior roles within the organization.

Senior Backend Engineer

Fintech Innovations Ltd

Dublin, Ireland

www.fintech-innovations.ie

June 2020 - December 2022

Architected a real-time transaction processing system handling over 10,000 requests per second using Go and Kafka, achieving 99.99 percent uptime.

Migrated legacy monolithic application to microservices architecture, reducing average response time from 800ms to 120ms and enabling independent team deployments.

Implemented comprehensive monitoring and alerting systems using Prometheus and Grafana that decreased mean time to detection for critical issues from 15 minutes to 2 minutes.

Conducted performance optimization work across the platform that resulted in 45 percent reduction in cloud infrastructure costs while maintaining service levels.

Backend Engineer

DataFlow Systems

Cork, Ireland

www.dataflow.net

August 2017 - May 2020

Developed and maintained REST APIs and microservices using Java Spring Boot serving multiple internal and external clients with stringent SLA requirements.

Designed and implemented a PostgreSQL database optimization project that improved query performance by 50 percent and supported growth to 10 million daily active users.

Led the adoption of Docker and container orchestration, establishing best practices that reduced development environment setup time from two hours to five minutes.

Collaborated with DevOps team to build CI/CD pipelines using Jenkins that automated testing and deployment, reducing time to production for features from two weeks to two days.

EDUCATION

Bachelor of Science in Computer Science

University College Dublin

Dublin, Ireland

Graduated: June 2017

ADDITIONAL INFORMATION

AWS Certified Solutions Architect Associate

GitHub Public Repositories:

- `golang-microservice-framework`: Lightweight framework for building microservices in Go with built-in observability
- `kubernetes-deployment-templates`: Collection of production-ready Helm charts for common applications
- `postgres-optimization-guide`: Documentation and scripts for PostgreSQL query optimization and indexing strategies
- `infrastructure-as-code-examples`: Terraform modules for AWS infrastructure with best practices and examples
