PROFESSIONAL SUMMARY

I'm a DevOps engineer with 3 years of hands-on experience building and maintaining cloud infrastructure, primarily on AWS and Azure. I've worked across the full deployment pipeline from containerization to production monitoring, and I'm most engaged when solving infrastructure problems that directly improve developer productivity. I started my career focused on CI/CD pipelines but have developed strong interests in cost optimization and incident response.

TECHNICAL SKILLS

Cloud Platforms: AWS (EC2, S3, RDS, Lambda, CloudFormation), Azure (VMs, App Service, DevOps)

Container Technologies: Docker, Kubernetes, Docker Compose

Infrastructure as Code: Terraform, CloudFormation, Ansible

CI/CD Tools: Jenkins, GitLab CI, GitHub Actions

Monitoring and Logging: Prometheus, Grafana, ELK Stack, CloudWatch

Scripting Languages: Bash, Python, PowerShell

Databases: PostgreSQL, MySQL, MongoDB

Version Control: Git, GitHub, GitLab

Operating Systems: Linux (Ubuntu, CentOS), Windows Server

WORK EXPERIENCE

DevOps Engineer

TechVision Solutions

www.techvisionsolutions.io

Lisbon, Portugal

March 2022 - Present

Designed and deployed Kubernetes clusters on AWS EKS hosting 12+ microservices serving 50K monthly active users with 99.9% uptime

Implemented Infrastructure as Code using Terraform, managing VPC, security groups, RDS databases, and load balancers across development, staging, and production environments

Reduced deployment time from 45 minutes to 8 minutes by building a custom GitLab CI pipeline with automated testing and canary deployments

Set up comprehensive monitoring using Prometheus and Grafana with 80+ dashboards and automated alerts for critical system metrics

Infrastructure Engineer

CloudNext Systems

www.cloudnext.co

Lisbon, Portugal

June 2021 - February 2022

Migrated legacy on-premise applications to AWS cloud, reducing infrastructure costs by 35% while improving performance and scalability

Managed Azure resource groups and implemented cost optimization strategies that saved 28K euros annually through reserved instances and right-sizing

Automated repetitive infrastructure tasks using Bash and Python scripts, eliminating approximately 16 hours of manual work per month

Documented infrastructure architecture and runbooks for disaster recovery procedures, resulting in RTO reduction from 6 hours to 2 hours

Junior DevOps Engineer

DataStream Technologies

www.datastream.net

Lisbon, Portugal

August 2020 - May 2021

Maintained and supported 15 Linux servers across multiple environments, handling patching, security updates, and performance optimization

Assisted in building Docker containerization strategy, converting 8 monolithic applications into microservices deployed on Docker Compose

Created backup automation scripts in Bash that reduced manual backup procedures by 90% and ensured daily recovery testing

Supported developers with troubleshooting deployment issues and provided basic CI/CD pipeline guidance using Jenkins

EDUCATION

Bachelor of Science in Computer Science

Instituto Superior Técnico, Universidade de Lisboa

Lisbon, Portugal

Graduated: June 2020

CERTIFICATIONS

AWS Certified Cloud Practitioner

HashiCorp Certified Associate: Terraform

GITHUB REPOSITORIES

terraform-aws-eks-cluster: Production-ready Terraform module for deploying EKS clusters with customizable node groups and networking

docker-microservices-deployment: Example multi-container application with Docker Compose and local Kubernetes setup for learning

gitlab-ci-pipeline-templates: Reusable GitLab CI/CD configuration templates for Python, Node.js, and Go applications

prometheus-grafana-monitoring: Complete monitoring stack setup with Prometheus, Grafana dashboards, and alerting rules
