PROFESSIONAL SUMMARY

I'm a data analyst with seven years of experience helping Swedish tech companies understand their data. I've built dashboards that caught critical business issues before they became problems, and I genuinely enjoy the detective work of tracking down data quality issues. I'm comfortable moving between SQL queries and Python scripts, and I've worked with teams that range from five people to a few hundred.

WORK EXPERIENCE

Senior Data Analyst

DataViz Solutions AB

Stockholm, Sweden

www.dataviz.se

March 2021 - Present

Designed and maintained 15 Tableau dashboards used by marketing and product teams to track KPIs across three business units, reducing ad spend waste by 23 percent year-over-year.

Led the migration of legacy reporting infrastructure from Excel to a PostgreSQL data warehouse, enabling real-time analysis instead of weekly manual reports.

Mentored two junior analysts on SQL optimization techniques and A/B testing methodology, conducting weekly code reviews and helping them move into independent project ownership.

Identified and documented data quality issues in customer event tracking that were causing revenue attribution errors, working with engineering to implement fixes that improved financial reporting accuracy.

Data Analyst

Nordic Tech Ventures

Stockholm, Sweden

nordictechventures.io

June 2018 - February 2021

Built automated ETL pipelines using Python and Apache Airflow to ingest data from 12 different SaaS tools into a central data warehouse, eliminating 8 hours of weekly manual work.

Created self-service analytics tools for 40+ business stakeholders using Looker, reducing requests for ad-hoc analysis by 35 percent.

Conducted cohort analysis and retention studies that informed product roadmap decisions, resulting in a 15 percent improvement in month-over-month retention for the core user base.

Established data governance standards and documentation practices that reduced onboarding time for new team members from three weeks to five days.

Junior Data Analyst

Fintech Growth AB

Stockholm, Sweden

fintechgrowth.co

August 2016 - May 2018

Analyzed transaction data using SQL to support customer segmentation projects, enabling targeted marketing campaigns that increased conversion rates by 18 percent.

Developed monthly financial reports using Excel and Power BI for C-level stakeholders, ensuring data accuracy through manual spot-checking and validation against source systems.

Supported A/B testing framework by calculating statistical significance thresholds and interpreting test results for the product team across 25 experiments.

Created documentation and runbooks for common data requests, establishing the foundation for self-service analytics culture within the organization.

EDUCATION

Master of Science in Statistics

Stockholm University

Stockholm, Sweden

Completed 2016

Bachelor of Science in Mathematics

Uppsala University

Uppsala, Sweden

Completed 2014

TECHNICAL SKILLS

SQL: PostgreSQL, MySQL, T-SQL, query optimization

Python: Pandas, NumPy, data cleaning, scripting

Visualization: Tableau, Looker, Power BI

Databases: PostgreSQL, MySQL, Snowflake

ETL: Apache Airflow, Python scripts

Statistical Analysis: A/B testing, cohort analysis, hypothesis testing

Version Control: Git, GitHub

Other: Excel, Google Analytics, Segment

LANGUAGES

Swedish (Native)

English (Fluent)
