PROFESSIONAL SUMMARY

I'm a data scientist with 2 years of hands-on experience building predictive models and analyzing large datasets for tech companies. I started my career fascinated by turning raw data into actionable insights and have developed strong foundations in Python, SQL, and machine learning. I enjoy working on supervised learning problems and finding patterns that help product teams make better decisions.

WORK EXPERIENCE

Data Scientist

TechViz Analytics, Paris

techviz.io

March 2023 - Present

Developed machine learning models to predict customer churn, achieving 82% accuracy on the test set and helping reduce annual churn by 5 million euros in revenue impact.

Built automated data pipelines using Python and Apache Airflow to process 50GB of daily user event data and feed insights into company dashboards.

Conducted exploratory data analysis on A/B testing results for 12 product experiments, delivering recommendations that increased feature adoption by 18%.

Collaborated with product and engineering teams to define metrics, validate hypotheses, and translate business questions into measurable data science objectives.

Junior Data Scientist

DataFlow Solutions, Lyon

dataflow.co

November 2021 - February 2023

Cleaned and preprocessed complex datasets with missing values and outliers, implementing custom validation scripts that improved data quality scores from 73% to 91%.

Created time series forecasting models using ARIMA and LSTM networks to predict monthly subscription revenue with mean absolute error of 3.2%.

Designed and delivered SQL queries to extract features from relational databases, reducing query execution time by 40% through optimization techniques.

Contributed to documentation and knowledge sharing sessions, helping three junior analysts understand classification algorithms and model evaluation metrics.

Data Analyst Intern

Insight Partners, Paris

insightpartners.net

June 2021 - October 2021

Analyzed user behavior data from mobile applications to identify usage patterns and segment customers into five distinct personas for targeted marketing campaigns.

Built interactive Tableau dashboards displaying KPIs for stakeholders, tracking product performance metrics across 15 different features.

Performed statistical hypothesis testing using Python to validate assumptions about user engagement and provide quantitative evidence for business decisions.

Participated in daily standup meetings and collaborated with senior analysts on a customer lifetime value prediction project during the internship period.

EDUCATION

Master of Science in Data Science

Universite Paris-Saclay, Paris

Graduated: June 2021

Specialization in Machine Learning and Statistical Analysis

TECHNICAL SKILLS

Programming Languages: Python, SQL, R

Machine Learning: Supervised Learning, Classification, Regression, Time Series Forecasting, Feature Engineering

Libraries and Frameworks: Scikit-learn, Pandas, NumPy, TensorFlow, Keras

Data Tools: Apache Airflow, Tableau, Git

Databases: PostgreSQL, MySQL

Statistical Methods: Hypothesis Testing, A/B Testing, Descriptive Statistics

Other: Linux Command Line, Jupyter Notebooks, Model Evaluation and Validation
