PROFESSIONAL SUMMARY

I'm a Principal Engineer with 14 years building scalable backend systems and leading technical teams across fintech, e-commerce, and cloud infrastructure companies. I started as a junior developer writing Python scripts and have evolved into someone who shapes architectural decisions and mentors senior engineers. I'm based in Barcelona and have a particular interest in distributed systems, database optimization, and helping teams move faster without sacrificing reliability.

WORK EXPERIENCE

Principal Engineer

TechVault Solutions

techvault.io

Barcelona, Spain

March 2021 - Present

Led the design and implementation of a microservices migration that reduced API response times by 60 percent across our payment processing platform, handling 2 million daily transactions. Established engineering standards and code review practices that improved deployment frequency from monthly to weekly releases while reducing production incidents by 45 percent. Managed a team of 8 engineers, conducting regular one-on-ones and creating technical growth plans that resulted in two internal promotions to senior roles. Architected a real-time analytics pipeline using Kafka and Spark that provided business intelligence dashboards to 150 internal stakeholders within 15 minutes of data generation.

Senior Software Engineer

CloudNine Data Systems

cloudninedata.net

Barcelona, Spain

June 2017 - February 2021

Designed and built a distributed data warehouse solution handling 500 terabytes of customer data, implementing partitioning strategies that reduced query times from hours to minutes for analytical workloads. Took ownership of the database performance team, where I identified and resolved critical bottlenecks in PostgreSQL and Redis clusters that were affecting 200 concurrent applications. Mentored 6 junior engineers in database design patterns, system debugging, and capacity planning through pair programming sessions and formal training modules. Contributed to open source database tooling projects that gained adoption across 30 internal teams and reduced infrastructure provisioning time by 3 weeks.

Software Engineer

DataFlow Technologies

dataflow.co

Madrid, Spain

January 2013 - May 2017

Built REST APIs and backend services in Python and Java that processed real-time e-commerce transactions, serving peak traffic of 50,000 requests per second during seasonal campaigns. Implemented caching strategies

using Redis and Memcached that improved application response times by 70 percent and reduced database load significantly. Contributed to the migration of monolithic applications to containerized microservices, working with Docker and Kubernetes to improve deployment reliability. Participated in on-call rotations and resolved production incidents, implementing monitoring and alerting systems that reduced mean time to detection by 80 percent.

EDUCATION

Bachelor of Science in Computer Science

Universitat Autònoma de Barcelona

Barcelona, Spain

Graduated: June 2012

TECHNICAL SKILLS

Languages: Python, Java, Go, SQL, JavaScript

Databases: PostgreSQL, MySQL, MongoDB, Redis, Elasticsearch

Cloud Platforms: AWS (EC2, RDS, S3, Lambda), Google Cloud Platform

Container and Orchestration: Docker, Kubernetes, Docker Compose

Message Queues and Streaming: Kafka, RabbitMQ, Apache Spark

Monitoring and Logging: Prometheus, Grafana, ELK Stack, Datadog

Architecture and Design: Microservices, API Design, System Design, Distributed Systems

DevOps and Tools: Git, Jenkins, GitLab CI/CD, Terraform, Linux Administration
