PROFESSIONAL SUMMARY

I'm a junior data engineer based in Liverpool with a genuine passion for building reliable data pipelines and turning raw data into actionable insights. I've spent the last year working hands-on with cloud platforms and SQL, and I'm particularly interested in optimizing data workflows for performance. I enjoy problem-solving and learning new tools, and I'm eager to contribute to projects that process data at scale.

TECHNICAL SKILLS

Programming Languages: Python, SQL, Bash

Data Technologies: Apache Spark, Pandas, ETL processes

Cloud Platforms: AWS (EC2, S3, RDS), Google Cloud Platform

Databases: PostgreSQL, MySQL

Tools and Frameworks: Apache Airflow, Git, Jupyter Notebooks, Terraform

Data Formats: JSON, CSV, Parquet, Avro

WORK EXPERIENCE

Data Engineering Intern

DataFlow Systems Ltd

dataplowtech.io

Liverpool, United Kingdom

June 2023 - September 2023

Developed and maintained Python scripts to extract data from REST APIs and load into PostgreSQL databases, processing approximately 500,000 records daily.

Assisted in building an Apache Airflow pipeline that automated daily ETL jobs, reducing manual processing time by 60 percent.

Wrote comprehensive documentation for five data pipelines and created runbooks for on-call troubleshooting.

Identified and resolved a data quality issue in the payment transactions table that was causing downstream reporting errors.

Junior Data Engineer

CloudMetrics Solutions

cloudmetrics.co

Liverpool, United Kingdom

October 2023 - March 2024

Built and deployed three ETL pipelines using Python and PySpark to ingest data from multiple sources including APIs, CSV files, and databases.

Optimized SQL queries for a customer analytics dashboard, improving query performance from 45 seconds to 8 seconds.

Implemented data validation checks and alerting mechanisms using Python to catch upstream data quality issues before they reached production.

Collaborated with analytics team to define data schemas and documented business logic in technical specifications.

Data Engineer

Vertex Analytics Ltd

vertexanalytics.net

Liverpool, United Kingdom

April 2024 - Present

Support the design and implementation of data warehousing solutions on AWS, managing S3 buckets, RDS instances, and data catalog metadata.

Maintain and monitor Apache Airflow DAGs that orchestrate 15 production pipelines, ensuring timely execution and alerting on failures.

Created a Python utility library that standardizes data transformation logic across multiple teams, reducing code duplication.

Participated in code reviews and contributed to establishing data engineering best practices within the team.

EDUCATION

Bachelor of Science in Computer Science

University of Manchester

Manchester, United Kingdom

Graduated: June 2023

ADDITIONAL INFORMATION

GitHub Repositories:

- etl-pipeline-framework: Python framework for building modular data pipelines with validation
- spark-data-processor: PySpark utilities for processing large CSV datasets with partitioning optimization
- airflow-monitoring-dashboard: Custom monitoring dashboard for Apache Airflow DAG execution metrics
- sql-query-optimizer: Collection of optimized SQL patterns for common data warehouse queries

Certifications: AWS Certified Cloud Practitioner (in progress)
