PROFESSIONAL SUMMARY

I'm a Staff Engineer with 14 years building and scaling distributed systems at growth-stage companies across Stockholm. I've led teams through major infrastructure migrations, designed systems handling millions of requests daily, and mentored engineers who went on to lead their own teams. I enjoy solving complex architectural problems and writing code that's straightforward to understand and maintain.

TECHNICAL SKILLS

Languages: Go, Python, Java, SQL, TypeScript

Databases: PostgreSQL, Redis, DynamoDB, Elasticsearch

Infrastructure: Kubernetes, Docker, Terraform, AWS, GCP

Messaging: Kafka, RabbitMQ, gRPC

Specialties: Distributed Systems, Microservices, System Design, Database Optimization, CI/CD Pipelines

WORK EXPERIENCE

Staff Engineer

Velocity Systems

Stockholm, Sweden

velocity.io

January 2022 - Present

Designed and implemented a new event streaming architecture handling 2 million events per second, replacing legacy systems and reducing infrastructure costs by 40 percent

Led the migration of monolithic payment processing service to microservices, mentoring 5 junior engineers through the process and establishing patterns now used across the company

Established performance benchmarking standards and automated testing procedures that caught regressions before production deployment

Built and maintained Go libraries used across 12 services, reducing code duplication and improving consistency in error handling and logging

Senior Engineer

DataMind AB

datamaindo.net

Stockholm, Sweden

June 2018 - December 2021

Architected real-time analytics pipeline using Kafka and custom Go services that reduced query latency from 30 seconds to under 2 seconds for customer dashboards

Guided team through Kubernetes adoption, setting up multi-cluster deployment strategy that improved availability from 99.5 percent to 99.95 percent

Debugged and fixed critical memory leak in Python service that reduced pod restarts by 95 percent and improved cluster stability considerably

Took ownership of database infrastructure, optimizing PostgreSQL queries and implementing read replicas that improved application response times for 40 percent of user traffic

Software Engineer

TechCore Solutions

techcore.co

Stockholm, Sweden

March 2010 - May 2018

Built distributed caching layer using Redis and memcached that improved API response times by 60 percent for our largest customers

Developed comprehensive monitoring and alerting system using Prometheus and Grafana that gave the team visibility into production issues before customers reported them

Refactored authentication service from monolithic Node.js application to Go microservice, improving login throughput by 300 percent

Mentored 3 engineers through code reviews and pair programming sessions, two of whom were promoted to senior positions within the company

EDUCATION

Master of Science in Computer Science

Royal Institute of Technology (KTH), Stockholm

Graduated: 2009

GITHUB REPOSITORIES

github.com/eriklundstrom/event-stream-go - High-performance event streaming library written in Go with Kafka integration

github.com/eriklundstrom/postgres-optimizer - Tool for analyzing and suggesting optimizations for slow PostgreSQL queries

github.com/eriklundstrom/distributed-cache - In-memory cache implementation with consistent hashing and TTL support

github.com/eriklundstrom/grpc-middleware - Collection of commonly used gRPC interceptors for logging, metrics, and authentication
