PROFESSIONAL SUMMARY

I'm a Staff Engineer with 8 years of experience building scalable systems and leading technical initiatives across startups and established companies. I've spent the last 3 years mentoring junior engineers while managing infrastructure that handles millions of requests daily. I enjoy diving deep into distributed systems problems and translating complex technical decisions into actionable strategies for teams.

WORK EXPERIENCE

Staff Engineer

CloudScale Systems

<https://cloudscale.io>

Copenhagen, Denmark

March 2022 - Present

Designed and implemented a service mesh migration that reduced latency by 35% for 12 microservices handling 8M requests per day.

Led the architecture review process for critical infrastructure components, establishing standards that improved deployment safety across the organization.

Mentored 4 junior engineers through hands-on code reviews and pair programming sessions, with 3 promoted to senior positions within the past year.

Reduced database query response times by 60% through query optimization and implemented read replicas for reporting workloads.

Senior Backend Engineer

TechNova ApS

<https://technova.net>

Copenhagen, Denmark

January 2019 - February 2022

Architected a real-time event processing system using Apache Kafka that replaced a legacy batch job, reducing reporting latency from 4 hours to 2 minutes.

Built and maintained a Python FastAPI microservice that became the foundation for 5 downstream services used by 150+ internal users.

Implemented comprehensive monitoring using Prometheus and Grafana, reducing mean time to detection for critical issues from 30 minutes to 3 minutes.

Collaborated with DevOps to establish infrastructure-as-code practices using Terraform, reducing deployment time from 2 hours to 15 minutes.

Backend Engineer

DataFlow Solutions

<https://dataflow.co>

Aarhus, Denmark

June 2016 - December 2018

Developed and maintained REST APIs using Django and PostgreSQL, serving 2M+ monthly active users across multiple client applications.

Optimized database schema and implemented proper indexing strategies that improved query performance by 45% and reduced database costs by 30%.

Introduced automated testing practices, increasing test coverage from 12% to 82% and reducing production bugs by 60%.

Participated in on-call rotations and resolved critical production incidents, with average MTTR of 25 minutes across 40+ incidents handled.

EDUCATION

Master of Science in Computer Science

Technical University of Denmark (DTU)

Copenhagen, Denmark

2014 - 2016

Bachelor of Science in Computer Science

Aarhus University

Aarhus, Denmark

2011 - 2014

SKILLS

Languages: Python, Go, TypeScript, SQL, Bash

Backend Frameworks: FastAPI, Django, Flask, Node.js/Express

Databases: PostgreSQL, MySQL, Redis, MongoDB, DynamoDB

Infrastructure & DevOps: Docker, Kubernetes, Terraform, AWS (EC2, S3, RDS, Lambda), Google Cloud Platform

Data & Messaging: Apache Kafka, RabbitMQ, Apache Spark

Monitoring & Logging: Prometheus, Grafana, ELK Stack, Datadog

Tools & Practices: Git, CI/CD pipelines (GitHub Actions, GitLab CI), Agile, System design

GITHUB REPOSITORIES

mklausen/kafka-stream-processor

<https://github.com/mklausen/kafka-stream-processor>

Go-based Kafka consumer for real-time data processing with 850+ stars

mklausen/distributed-cache-layer

<https://github.com/mklausen/distributed-cache-layer>

Python implementation of distributed caching patterns using Redis clustering

mklausen/postgres-optimization-guide

<https://github.com/mklausen/postgres-optimization-guide>

Documentation and scripts for PostgreSQL performance tuning with 420+ stars

mklausen/fastapi-auth-service

<https://github.com/mklausen/fastapi-auth-service>

Containerized authentication service with OAuth2 and JWT support, 180+ stars
