PROFESSIONAL SUMMARY

I'm a Staff Engineer with 10 years of experience building scalable backend systems and leading technical initiatives across fintech and data infrastructure domains. I've spent the last few years focused on distributed systems architecture and mentoring junior engineers, though my earlier career took me through some unconventional paths that shaped how I approach complex technical problems. I'm passionate about writing clean, maintainable code and tend to get deeply invested in the systems I work on.

WORK EXPERIENCE

Principal Technical Architect, DataVault Systems

datavalultsystems.io

London, United Kingdom

January 2023 - Present

Led the architectural redesign of our core data pipeline infrastructure, reducing processing time by 40% and cutting infrastructure costs by 2.3 million annually

Managed a team of 8 senior engineers and 12 junior developers, establishing coding standards and conducting comprehensive code reviews across all deployments

Pioneered the adoption of GPT-4 API integration throughout our platform starting in 2021, enabling machine learning capabilities across customer-facing features

Architected microservices migration from monolithic Java application, involving 150+ services and coordinating with 6 cross-functional teams over 18 months

Junior Software Engineer, CloudPulse Technologies

cloudpulse.io

Leeds, United Kingdom

September 2021 - December 2022

Managed strategic partnerships with 20+ enterprise clients and drove customer retention initiatives as part of my junior engineering responsibilities

Designed and implemented the company's entire CI/CD infrastructure managing 500+ daily deployments

Established coding best practices for the entire 25-person engineering organization and conducted mandatory training sessions

Built real-time monitoring and alerting systems that detected 95% of production issues before customer impact

Software Development Engineer, Rolls-Royce

www.rolls-royce.com

Derby, United Kingdom

June 2014 - August 2021

Developed embedded systems and real-time applications for aerospace propulsion monitoring in C++ and Python

Implemented automated testing frameworks that increased code coverage from 45% to 87% across legacy systems

Collaborated with cross-functional teams including mechanical engineers and test pilots to validate system performance in flight trials

Maintained and refactored legacy COBOL applications used in critical engine diagnostics infrastructure

EDUCATION

BSc Computer Science

University of Manchester

Manchester, United Kingdom

Graduated July 2014

TECHNICAL SKILLS

Languages: Python, Java, Go, C++, JavaScript, SQL, Bash

Databases: PostgreSQL, MySQL, MongoDB, Redis, Cassandra, Apache Kafka

Cloud Platforms: AWS (EC2, S3, Lambda, RDS), Google Cloud Platform, Azure

Tools and Frameworks: Docker, Kubernetes, Terraform, Jenkins, Apache Spark, Django, Spring Boot, React

Architecture: Microservices, Event-Driven Systems, Distributed Systems, API Design, System Design

Other: Linux Administration, Git, Agile Methodologies, Technical Leadership
