PROFESSIONAL SUMMARY

Machine Learning Engineer with 14 years of experience building production systems for large-scale data challenges. Started as a data analyst and transitioned into ML engineering, developing deep expertise in computer vision and time series forecasting. I'm drawn to problems that require both statistical rigor and pragmatic engineering solutions. Based in Glasgow but have worked with distributed teams across Europe and Asia.

WORK EXPERIENCE

Staff Machine Learning Engineer

Vertex Analytics

vertexanalytics.io

Glasgow, United Kingdom

March 2021 - Present

Led the design and deployment of a real-time anomaly detection system processing 2.3 million transactions daily, reducing false positives by 67% through ensemble methods and feedback loops. Mentored a team of 5 junior engineers on productionizing ML models, establishing code review standards that reduced model drift incidents by 85%. Architected a feature store using Delta Lake and PySpark that reduced model training time from 8 hours to 22 minutes and democratized feature access across 12 product teams. Presented findings on neural network uncertainty quantification at two internal workshops, driving adoption of probabilistic predictions in risk assessment models.

Senior Machine Learning Engineer

Prism Data Systems Ltd

www.prismdatasystems.com

Edinburgh, United Kingdom

June 2017 - February 2021

Built and maintained computer vision pipeline for automated document classification, achieving 94.2% accuracy on 50+ document types and processing 15,000 documents daily in production. Developed time series forecasting models for demand planning that improved inventory accuracy to 89%, saving approximately 2.1 million pounds annually in excess stock costs. Collaborated with infrastructure team to containerize 18 legacy models using Docker and Kubernetes, reducing deployment cycle time from 6 weeks to 3 days. Conducted performance audits on 25 existing models and identified technical debt, leading to refactoring of 7 critical systems and reducing inference latency by 40%.

Machine Learning Engineer

Sentinel ML Co

sentinelml.net

London, United Kingdom

August 2010 - May 2017

Implemented gradient boosting models for customer churn prediction with 76% precision, leading to targeted retention campaigns that recovered 4.2 million pounds in annual recurring revenue. Owned the full lifecycle of 12

classification and regression models, from exploratory analysis through A/B testing and monitoring. Built data pipelines using Python and SQL to aggregate features from 6 disparate data sources, enabling faster model iteration cycles. Developed internal Python library for cross-validation and hyperparameter optimization, adopted by 8 team members and standardizing model evaluation processes across the organization.

EDUCATION

MSc Machine Learning

University of Edinburgh

Edinburgh, United Kingdom

2008 - 2010

BSc Computer Science with Mathematics

University of Glasgow

Glasgow, United Kingdom

2004 - 2008

TECHNICAL SKILLS

Machine Learning: PyTorch, TensorFlow, scikit-learn, XGBoost, LightGBM, gradient boosting, ensemble methods, neural networks, computer vision, time series forecasting, anomaly detection, probabilistic modeling

Data Engineering: PySpark, SQL, Apache Airflow, Delta Lake, Pandas, NumPy, feature engineering, ETL pipelines, data warehousing

Programming: Python, Java, Scala, Bash

MLOps and Deployment: Docker, Kubernetes, model monitoring, A/B testing, feature stores, model versioning, continuous integration

Statistical Methods: Bayesian inference, hypothesis testing, experimental design, causal inference, uncertainty quantification

Cloud Platforms: AWS SageMaker, AWS S3, Google Cloud Platform
