PROFESSIONAL SUMMARY

I'm a Machine Learning Engineer with two years of hands-on experience building and deploying ML models in production environments. I've worked with Python, TensorFlow, and cloud platforms to solve real business problems, from classification tasks to time series forecasting. I'm particularly interested in model optimization and making machine learning systems more interpretable for stakeholders. I'm looking to deepen my expertise in NLP and computer vision while contributing to projects that have measurable impact.

WORK EXPERIENCE

Machine Learning Engineer

DataFlow Systems Ltd

Leeds, United Kingdom

January 2023 - Present

https://www.dataflowsystems.com

Developed and maintained machine learning pipelines for customer churn prediction, improving model accuracy from 78% to 84% through feature engineering and hyperparameter tuning

Collaborated with data engineers to implement automated model retraining processes using Apache Airflow, reducing manual intervention by 60%

Created data validation checks and monitoring dashboards to track model performance in production, catching data drift issues within 48 hours

Documented model architectures and preprocessing steps to ensure knowledge transfer across the team and facilitate debugging

Data Scientist (ML Focus)

Quantum Insights Analytics (Previously known as TechVision Solutions)

Manchester, United Kingdom

September 2022 - December 2022

Built classification models using scikit-learn and XGBoost to segment customer behavior patterns, resulting in more targeted marketing campaigns

Performed exploratory data analysis on datasets containing 2 million+ records, identifying key features that improved model performance by 12%

Presented findings and model recommendations to non-technical stakeholders through visualizations and simplified explanations

Participated in code reviews and contributed improvements to the ML codebase following PEP 8 standards

Junior Machine Learning Engineer

InnovateTech Solutions

Leeds, United Kingdom

June 2021 - August 2022

https://www.innovatetech.io

Assisted in building and testing neural networks for image classification tasks, achieving 91% accuracy on validation datasets

Preprocessed and cleaned raw data from multiple sources, removing inconsistencies and handling missing values using pandas

Worked with AWS SageMaker to train models at scale and deployed them to production endpoints for real-time predictions

Conducted literature reviews on emerging ML techniques and wrote technical summaries to share findings with the wider team

EDUCATION

BSc Computer Science

University of Leeds

Leeds, United Kingdom

Graduated: June 2021

Relevant coursework: Machine Learning, Data Mining, Artificial Intelligence, Software Engineering, Database Systems

SKILLS

Programming Languages: Python, SQL, R

Machine Learning Frameworks: TensorFlow, Keras, scikit-learn, XGBoost

Data Processing: pandas, NumPy, Apache Spark

Cloud Platforms: AWS (SageMaker, EC2, S3), Google Cloud Platform

Tools and Technologies: Jupyter Notebook, Docker, Git, Linux, Tableau

Statistics and Analysis: Hypothesis testing, A/B testing, statistical modeling

Model Types: Classification, Regression, Time Series Forecasting, Neural Networks
