PROFESSIONAL SUMMARY

Data engineer with 2 years of experience building and maintaining data pipelines and ETL processes. I've worked primarily with Python, SQL, and cloud platforms to help organizations move and transform data at scale. I'm based in Edinburgh and enjoy solving problems with data architecture, though I'm still learning plenty about distributed systems and optimization. Outside of work, I contribute to open source projects and spend time hiking around the Pentland Hills.

TECHNICAL SKILLS

Languages: Python, SQL, Bash, Java

Data Technologies: Apache Spark, Apache Airflow, Kafka, PostgreSQL, MySQL

Cloud Platforms: AWS (EC2, S3, RDS, Lambda), Google Cloud Platform

Tools and Frameworks: Pandas, NumPy, Git, Docker, Apache Hadoop

Databases: Relational databases, basic NoSQL experience

Other: Linux, RESTful APIs, data warehousing concepts

WORK EXPERIENCE

Data Engineer

Synapse Data Ltd

Edinburgh, United Kingdom

synapsedataltd.io

June 2023 - Present

Developed and deployed 12+ ETL pipelines processing 500GB+ of daily data using Apache Airflow and Python to support business intelligence operations

Optimized SQL queries reducing dashboard refresh times by 35% through indexing strategies and query restructuring for PostgreSQL and MySQL databases

Built automated data validation frameworks using Python to catch data quality issues before they reached production systems, preventing 8+ data incidents

Collaborated with analytics team to design and implement a new data warehouse schema supporting real-time reporting requirements for executive stakeholders

Junior Data Engineer

Deloitte

London, United Kingdom

deloitte.com

September 2022 - May 2023

Supported design and implementation of cloud-based data pipelines on AWS using Lambda functions and S3, processing structured and unstructured data for financial services clients

Created documentation and runbooks for 6 critical data workflows, reducing onboarding time for new team members by 40%

Performed data quality audits on client datasets, identifying and documenting data integrity issues affecting downstream analytics applications

Assisted senior engineers in migrating legacy batch processes from on-premise systems to cloud infrastructure, resulting in 50% reduction in infrastructure costs

Graduate Data Engineer

CloudPeak Technologies Ltd

Edinburgh, United Kingdom

cloudpeaktech.net

July 2021 - August 2022

Developed Python scripts to extract, transform, and load data from multiple APIs into PostgreSQL databases, supporting 15+ internal business applications

Implemented monitoring and alerting for data pipelines using custom logging solutions, reducing mean time to issue detection from 4 hours to 30 minutes

Assisted in capacity planning and database maintenance tasks including backup verification, index optimization, and performance tuning

Shadowed senior data engineers on production incidents and participated in post-incident reviews to improve system reliability

EDUCATION

BSc Computer Science

University of Edinburgh

Edinburgh, United Kingdom

Graduated: June 2021

Grade: 2:1

GITHUB REPOSITORIES

github.com/jamescameron92/etl-pipeline-framework

Public Python library for building modular ETL pipelines with Airflow, includes example DAGs and documentation

github.com/jamescameron92/sql-query-optimizer

Collection of SQL optimization patterns and analysis tools, used for educational purposes and code reviews

github.com/jamescameron92/data-validation-toolkit

Python package for implementing data quality checks and assertions in data pipelines

github.com/jamescameron92/spark-batch-processor

Example Apache Spark application for processing CSV files in batch mode with error handling

CERTIFICATIONS

AWS Certified Cloud Practitioner - Amazon Web Services, 2023
