PROFESSIONAL SUMMARY

Experienced Staff Engineer with 8 years building scalable backend systems and leading technical initiatives across fintech and SaaS environments. I've spent the last few years helping teams move away from monolithic architectures and establish solid deployment practices. I work best when I can balance deep technical work with mentoring other engineers, and I'm particularly interested in problems involving distributed systems and reliability engineering.

WORK EXPERIENCE

Staff Engineer

Veritas Digital Solutions

veritas-digital.io

Glasgow, United Kingdom

September 2022 - Present

Led the redesign of our core payment processing service, reducing latency by 45% through database query optimisation and implementing a caching layer using Redis. Established code review standards and conducted quarterly architecture reviews with the engineering team to identify technical debt. Mentored four junior engineers on microservices design patterns and system debugging techniques. Championed the adoption of automated testing practices, increasing test coverage from 52% to 81% across the platform.

Senior Software Engineer

Catalyst Systems Ltd

catalyst-systems.net

Edinburgh, United Kingdom

January 2021 - August 2022

Architected and delivered a real-time analytics platform processing 2 million events daily using Apache Kafka and PostgreSQL, serving as the foundation for customer dashboards. Owned the migration of legacy REST APIs to GraphQL, improving data query efficiency and reducing client-side overfetching. Built and maintained CI/CD pipelines using Jenkins and Docker, reducing deployment time from 45 minutes to 12 minutes. Collaborated with product and design teams to deliver three major feature releases that increased customer engagement by 38%.

Platform Engineer

TechCore Solutions

techcore.co

Glasgow, United Kingdom

March 2019 - December 2020

Developed and maintained infrastructure automation using Terraform and Ansible across AWS, managing deployments for 15 different microservices. Implemented comprehensive monitoring and alerting solutions using Prometheus and Grafana, reducing incident detection time from 20 minutes to 3 minutes. Led the cloud migration project moving 40 applications from on-premise data centres to AWS, coordinating with three teams and completing the transition 6 weeks ahead of schedule. Designed and documented disaster recovery procedures

and conducted quarterly failover tests to ensure business continuity.

EDUCATION

MSc Computing Science

University of Glasgow

Glasgow, United Kingdom

2015 - 2017

BSc Computer Science

University of Strathclyde

Glasgow, United Kingdom

2011 - 2015

TECHNICAL SKILLS

Languages: Python, Java, TypeScript, SQL, Bash

Cloud Platforms: AWS (EC2, S3, RDS, Lambda, CloudFormation), Docker, Kubernetes

Databases: PostgreSQL, MySQL, MongoDB, Redis

Tools and Frameworks: Apache Kafka, Elasticsearch, Prometheus, Grafana, Jenkins, Git

Specialisms: Microservices Architecture, System Design, CI/CD Pipelines, Infrastructure as Code, API Design, Database Optimisation, Distributed Systems
