PROFESSIONAL SUMMARY

Results-driven and highly motivated Senior Data Engineer with a proven track record of spearheading cutting-edge data solutions that deliver actionable insights across cross-functional teams. Passionate about leveraging innovative technologies to champion mission-critical data infrastructure and synergistically drive data-driven decision making to support organisational objectives. Demonstrated expertise in architecting scalable data pipelines and enabling dynamic analytical capabilities that empower stakeholders to unlock value from complex datasets. Committed to delivering exceptional outcomes through technical excellence and collaborative engagement with key business partners.

CORE SKILLS

Data Engineering: ETL/ELT, Data Pipeline Architecture, Data Warehousing, Data Lakes

Programming Languages: Python, SQL, Scala, Java

Big Data Technologies: Apache Spark, Apache Hadoop, Airflow

Cloud Platforms: AWS (S3, EC2, Redshift, Lambda, Glue), Azure Data Factory, Google Cloud Platform

Data Technologies: Snowflake, PostgreSQL, MySQL, MongoDB, Cassandra, Kafka

Tools and Frameworks: Jupyter Notebooks, Git, Jenkins, dbt, Docker, Kubernetes

Data Formats: JSON, Parquet, CSV, Avro

Methodologies: Agile, Scrum, Data Modeling

WORK EXPERIENCE

Senior Data Engineer

DataFlow Solutions Ltd

www.dataflowsolutions.io

Glasgow, United Kingdom

March 2022 - Present

Architected and deployed scalable ETL pipelines processing 50+ terabytes of daily data using Apache Spark and Airflow, resulting in 40% improvement in data processing efficiency and reduced infrastructure costs by GBP 150,000 annually.

Spearheaded migration of legacy batch processes to real-time streaming infrastructure using Kafka, enabling near-instantaneous data availability for critical business dashboards and reducing reporting latency from hours to minutes.

Championed implementation of dbt for data transformation layer, establishing reusable, version-controlled SQL models across analytics teams and improving code quality through comprehensive testing and documentation frameworks.

Led cross-functional collaboration with Data Science and Analytics teams to design and implement feature stores on AWS, supporting machine learning model development and accelerating time-to-market for predictive analytics initiatives.

Data Engineer

CloudTech Analytics

www.cloudtechanalytics.co

Edinburgh, United Kingdom

July 2019 - February 2022

Designed and maintained data warehouses on Snowflake handling 100+ million records daily, supporting 200+ concurrent users and delivering consistent sub-second query performance through optimised schema design and query tuning.

Implemented GPT-4 API integrations for natural language processing of unstructured data sources, enabling automated data quality profiling and semantic analysis across enterprise data assets.

Developed Python-based data validation frameworks achieving 99.95% data accuracy across all ingestion pipelines, reducing manual data quality checks by 85% and improving operational efficiency.

Established monitoring and alerting systems using CloudWatch and custom Python scripts, proactively identifying pipeline failures and data anomalies, reducing mean-time-to-resolution by 60%.

Data Engineer

Nexus Data Systems

www.nexusdatasystems.net

Glasgow, United Kingdom

June 2017 - June 2019

Built robust ETL pipelines using Python and SQL Server Integration Services, processing daily data volumes of 20+ terabytes and supporting analytics for 50+ business stakeholders across finance and operations divisions.

Optimised existing Hadoop clusters through performance tuning and resource allocation, achieving 35% reduction in query execution times and enabling more agile analytical workflows.

Collaborated with database administrators and network teams to implement disaster recovery and backup strategies, ensuring 99.9% system availability and zero data loss during critical business incidents.

Developed comprehensive data documentation and conducted knowledge transfer sessions, upskilling junior team members and establishing best practices for data pipeline development across the engineering function.

EDUCATION

BSc Computer Science

University of Edinburgh

Edinburgh, United Kingdom

Graduated: June 2017
