PROFESSIONAL SUMMARY

I'm a data scientist with three years of experience building predictive models and extracting insights from complex datasets across various industries. I enjoy working with Python and SQL to solve real business problems, and I've spent time optimizing machine learning pipelines and communicating findings to non-technical stakeholders. Outside of pure modelling work, I'm interested in data engineering practices and how to make analytics workflows more robust and scalable.

WORK EXPERIENCE

Senior Data Scientist

Synapse Data Ltd

https://www.synapse-data.io

Birmingham, United Kingdom

January 2023 - Present

Developed and deployed customer churn prediction models using XGBoost and logistic regression, reducing false positives by 18 percent and improving targeting accuracy for retention campaigns.

Built ETL pipelines in Python to process 2.5 million transaction records daily, reducing data processing time from 6 hours to 45 minutes through optimization of SQL queries and vectorized operations.

Created automated dashboards in Tableau connected to PostgreSQL databases, enabling stakeholders to monitor KPIs in real-time and reducing manual reporting by 20 hours per week.

Collaborated with product and engineering teams to define success metrics for three major feature releases, analyzing A/B test results and providing statistical validation of business outcomes.

Data Scientist

Pinnacle Analytics Group plc

https://www.pinnacle.co.uk

Birmingham, United Kingdom

November 2021 - December 2022

Designed and implemented a recommendation engine for e-commerce clients using collaborative filtering and content-based approaches, increasing average order value by 12 percent across pilot customers.

Performed exploratory data analysis on customer behaviour datasets containing 500k+ records, identifying key segments and developing targeted marketing strategies that improved campaign ROI by 25 percent.

Mentored two junior analysts on statistical methods and best practices for model validation, conducting weekly code reviews and helping them deliver their first production models.

Established data quality frameworks and documentation standards for the analytics team, reducing onboarding time for new team members from 4 weeks to 2 weeks.

Data Analyst

CloudPeak Technologies Ltd

https://www.cloudpeak-tech.net

Birmingham, United Kingdom

August 2021 - October 2021

Conducted time series forecasting analysis on supply chain data to predict inventory shortages, delivering actionable insights that reduced stockouts by 8 percent.

Wrote SQL queries to extract and aggregate data from multiple source systems, enabling cross-functional reporting for finance and operations teams.

Cleaned and preprocessed datasets containing missing values and inconsistencies, documenting data quality issues and liaising with data engineering team on remediation strategies.

Presented findings from market research analysis to senior management, using visualizations to communicate trends and supporting business decisions on product expansion.

EDUCATION

BSc Mathematics with Statistics

University of Birmingham

Birmingham, United Kingdom

Graduated: June 2021

SKILLS

Technical Skills: Python, SQL, Machine Learning, XGBoost, Logistic Regression, Scikit-learn, Pandas, NumPy, Time Series Analysis, A/B Testing, Statistical Analysis, Tableau, Data Visualization, PostgreSQL, Data Cleaning, ETL

Tools and Platforms: Jupyter Notebook, Git, Linux, Microsoft Excel, Figma

Soft Skills: Stakeholder Communication, Problem Solving, Team Collaboration, Project Delivery
