PROFESSIONAL SUMMARY

I'm a DevOps Engineer with 7 years of experience building scalable infrastructure and automating deployment pipelines across multiple cloud platforms. I've spent most of my career at mid-sized tech companies where I've handled everything from containerisation to Kubernetes orchestration, but I started my career doing junior-level support work at BT. I'm comfortable with infrastructure as code, CI/CD tooling, and cloud architecture, and I genuinely enjoy the problem-solving side of DevOps work rather than the politics that often comes with larger organisations.

WORK EXPERIENCE

Staff Principal Infrastructure Architect

CloudPeak Technologies Ltd

London, United Kingdom

January 2022 - Present

Architected and implemented a complete microservices infrastructure migration affecting 15 business units and managed a team of 8 senior engineers overseeing all infrastructure decisions across the organisation. Designed a multi-region active-active Kubernetes cluster setup with automated failover, reducing system downtime by 99.95% and improving disaster recovery capability. Led the strategic planning and execution of a containerisation initiative that moved 200+ legacy applications to Docker, reducing infrastructure costs by 35% and deployment time from hours to minutes. Mentored junior engineers and established infrastructure best practices across the entire engineering department, creating standardised runbooks and documentation that reduced mean time to resolution by 45%.

Senior DevOps Engineer

Synapse Data Ltd

www.synapse-data.io

Manchester, United Kingdom

June 2019 - December 2021

Implemented GitHub Actions workflows across 40+ repositories enabling fully automated testing, building, and deployment pipelines that reduced release cycle time from 2 weeks to 2 days. Built and maintained a Kubernetes cluster hosting 25+ microservices with automated scaling policies and self-healing capabilities, improving system reliability to 99.9% uptime. Developed comprehensive Terraform modules for AWS infrastructure provisioning, creating infrastructure templates that reduced new environment setup time from 3 weeks to 30 minutes. Established comprehensive monitoring and alerting systems using Prometheus and Grafana, reducing incident

response time by 60% and enabling proactive issue detection before customer impact.

Junior Systems Administrator

BT

www.bt.com

Leeds, United Kingdom

August 2017 - May 2019

Managed and maintained 200+ Linux and Windows servers across multiple data centres, performing regular patching, updates, and security compliance checks. Provided tier 2 technical support to internal teams, resolving network connectivity issues and system performance problems with 95% first-contact resolution rate. Assisted with initial infrastructure documentation and basic automation scripting using Bash, improving operational efficiency for routine tasks. Supported the deployment of applications to production environments, learning early exposure to release management and infrastructure basics.

EDUCATION

Bachelor of Science in Computer Science

University of Leeds

Leeds, United Kingdom

Graduated 2017

TECHNICAL SKILLS

Cloud Platforms: AWS, Azure, Google Cloud Platform

Container Technologies: Docker, Kubernetes, Docker Compose

Infrastructure as Code: Terraform, CloudFormation, Ansible

CI/CD Tools: Jenkins, GitLab CI, CircleCI, GitHub Actions

Monitoring and Logging: Prometheus, Grafana, ELK Stack, Datadog

Programming Languages: Python, Bash, Go

Version Control: Git, GitHub, GitLab

Databases: PostgreSQL, MySQL, MongoDB, Redis

Networking: TCP/IP, DNS, VPN, Load Balancing

Agile Methodologies: Scrum, Kanban
