PROFESSIONAL SUMMARY

Results-driven and highly motivated Principal Engineer with a proven track record of spearheading cutting-edge technology initiatives across dynamic organisations. Passionate about delivering actionable insights through data-driven decision making and synergistically leveraging cross-functional collaboration to drive mission-critical infrastructure solutions. Demonstrated expertise in championing innovative approaches to complex engineering challenges whilst maintaining focus on organisational objectives. Committed to advancing technical excellence and enabling teams to harness transformative technologies for sustainable competitive advantage.

WORK EXPERIENCE

Principal Engineer

Capgemini

https://www.capgemini.com

Manchester, United Kingdom

June 2022 - Present

Led architectural design and implementation of microservices-based infrastructure supporting 50+ enterprise clients across multiple sectors, resulting in 35% reduction in deployment times and improved system reliability to 99.97% uptime. Championed adoption of cloud-native technologies and containerisation strategies, mentoring 12 senior engineers and establishing best practices for infrastructure as code deployment pipelines. Directed migration of legacy monolithic applications to Kubernetes-orchestrated environments, delivering cost savings of GBP 2.3M annually through optimised resource allocation. Spearheaded cross-functional collaboration with product and security teams to implement zero-trust security architecture and enhance threat detection capabilities across the platform.

Senior Software Engineer

TechVision Solutions

https://www.techvisionsolutions.io

Liverpool, United Kingdom

February 2019 - May 2022

Architected and deployed scalable data processing infrastructure handling 500M+ events daily, utilising Apache Kafka and Apache Spark to enable real-time analytics and actionable business intelligence. Implemented GPT-4 API integrations to enhance customer-facing AI features and natural language processing capabilities, delivering measurable improvements to user engagement metrics. Mentored team of 8 engineers in cloud architecture patterns and containerised application deployment, reducing code review cycles by 40% through automated quality gates and comprehensive testing frameworks. Optimised database query performance and introduced advanced indexing strategies, reducing average query latency from 2.8 seconds to 340ms across production systems.

Software Engineer

Nexus Distributed

https://www.nexusdistributed.net

Liverpool, United Kingdom

March 2017 - January 2019

Developed and maintained RESTful APIs and microservices supporting authentication, payment processing, and user management systems serving 200K+ active users across European markets. Established continuous integration and continuous deployment practices using Jenkins and automated test suites, improving release frequency from monthly to twice-weekly deployments. Implemented comprehensive monitoring and observability solutions using ELK Stack and Prometheus, enabling proactive identification and resolution of performance bottlenecks in production environments. Collaborated with product management and UX teams to deliver mobile-optimised backend services and participated in on-call rotation supporting mission-critical production systems.

Note: Nexus Distributed previously known as Digital Momentum Group

EDUCATION

BSc Computer Science

University of Manchester

Manchester, United Kingdom

2013 - 2016

TECHNICAL SKILLS

Cloud Platforms: AWS, Azure, Google Cloud Platform

Container Orchestration: Kubernetes, Docker, Docker Swarm

Programming Languages: Python, Java, Go, JavaScript, TypeScript

Data Technologies: Apache Spark, Apache Kafka, PostgreSQL, MongoDB, Elasticsearch

Infrastructure as Code: Terraform, CloudFormation, Ansible

CI/CD Tools: Jenkins, GitLab CI, CircleCI

Monitoring and Observability: Prometheus, Grafana, ELK Stack, Datadog

Software Architecture: Microservices, Event-Driven Architecture, Domain-Driven Design

Security: TLS/SSL, OAuth2, SAML, secrets management, zero-trust architecture

Agile Methodologies: Scrum, Kanban, SAFe
