PROFESSIONAL SUMMARY

I'm a pragmatic DevOps engineer with eight years under my belt, having built and maintained infrastructure for everything from early-stage startups to mid-size financial services firms. I've got solid hands-on experience with Kubernetes, AWS, and CI/CD pipelines, and I genuinely enjoy the problem-solving aspect of infrastructure work. I'm based in Liverpool and prefer collaborative teams where I can mentor junior engineers while staying close to the technical work.

WORK EXPERIENCE

Senior DevOps Engineer

CloudScale Solutions Ltd

cloudscale.io

London, United Kingdom

March 2021 - Present

Architected and deployed a multi-region Kubernetes cluster supporting 40+ microservices for a fintech platform processing 500M transactions monthly, reducing deployment time from 45 minutes to 8 minutes through GitOps automation.

Implemented comprehensive infrastructure-as-code using Terraform and Ansible, managing 200+ cloud resources across development, staging, and production environments, resulting in 99.2% infrastructure consistency and reduced manual configuration errors.

Designed and rolled out an enterprise logging and monitoring solution using ELK stack and Prometheus, enabling real-time visibility across 15 teams and reducing mean time to incident detection from 22 minutes to 4 minutes.

Established and mentored a team of three junior DevOps engineers, creating runbooks, conducting weekly knowledge sharing sessions, and leading incident post-mortems that directly improved our on-call processes.

Lead DevOps Engineer

DataFlow Technologies Ltd

dataflow.co

Manchester, United Kingdom

September 2018 - February 2021

Led the migration of legacy applications from on-premises infrastructure to AWS, coordinating efforts across four teams and reducing monthly infrastructure costs by 35% while improving system reliability to 99.95% uptime.

Built and maintained a comprehensive CI/CD pipeline using Jenkins and GitLab, enabling the engineering team to deploy code 50+ times daily with zero-downtime deployments and comprehensive automated testing.

Administered and optimised RDS database clusters serving 300+ application instances, tuning query performance, implementing automated backups, and achieving a 40% reduction in database-related incidents.

Implemented Vault for secrets management across all environments, securing API keys, database credentials, and certificates for 80+ services and achieving compliance with SOC2 Type II requirements.

DevOps Engineer

Horizon Digital Services

horizondigital.net

Liverpool, United Kingdom

June 2016 - August 2018

Built and maintained Docker containerised applications across development and production environments, reducing deployment inconsistencies and improving developer workflow efficiency by 30%.

Managed AWS infrastructure including EC2, RDS, S3, and Lambda functions, ensuring high availability across multiple availability zones and implementing cost optimisation strategies that reduced monthly spend by 25%.

Developed bash and Python scripts to automate routine operational tasks including server provisioning, log aggregation, and health checks, reducing manual operational overhead by approximately 20 hours per month.

Collaborated with development teams to establish monitoring dashboards using CloudWatch and Grafana, providing real-time visibility into application performance and infrastructure health metrics.

EDUCATION

Bachelor of Science in Computer Science

University of Manchester

Manchester, United Kingdom

2012 - 2015

TECHNICAL SKILLS

Cloud Platforms: Amazon Web Services (EC2, RDS, S3, Lambda, VPC, IAM), basic Google Cloud Platform experience

Container Orchestration: Kubernetes (EKS, deployment, scaling, networking), Docker, container networking and storage

Infrastructure as Code: Terraform, Ansible, CloudFormation

CI/CD Tools: Jenkins, GitLab CI, GitHub Actions, ArgoCD

Monitoring and Logging: Prometheus, Grafana, ELK Stack (Elasticsearch, Logstash, Kibana), CloudWatch, DataDog

Scripting Languages: Bash, Python, Go

Databases: PostgreSQL, MySQL, MongoDB, Redis, AWS RDS administration

Version Control: Git, GitLab, GitHub

Security Tools: HashiCorp Vault, SSL/TLS certificates, security group configuration

Linux Administration: CentOS, Ubuntu, Red Hat Enterprise Linux, kernel tuning, performance optimisation

Networking: VPC configuration, DNS management, load balancing, network troubleshooting

Agile Methodologies: Jira, Confluence, Scrum practices
