PUBLIC REPOSITORIES:

- sentiment-analysis-toolkit (Python, scikit-learn, pandas)

- housing-price-predictor (Python, XGBoost, feature engineering)

- customer-churn-model (Python, logistic regression, visualization)

- nlp-text-classification (Python, NLTK, TF-IDF)

PROFESSIONAL SUMMARY

Data scientist with one year of professional experience building predictive models and analyzing datasets to solve business problems. Recently completed a degree in Statistics from the University of Edinburgh with a focus on machine learning applications. Comfortable working across the full data science pipeline from exploratory analysis through model deployment. I'm particularly interested in developing models for real-world classification tasks and learning how to scale analytical work in production environments.

WORK EXPERIENCE

Data Science Intern

TechVision Solutions

www.techvisionsolutions.io

Edinburgh, United Kingdom

June 2023 - September 2023

- Developed and trained three classification models using scikit-learn to predict customer churn, achieving 82% accuracy on test data

- Conducted exploratory data analysis on 500,000+ customer records using pandas and matplotlib to identify key retention drivers

- Built automated reporting dashboards in Tableau to track model performance metrics for the business intelligence team

- Collaborated with product managers to translate business requirements into feature engineering specifications

Junior Data Analyst

DataWorks Consulting

www.dataworks.co

Edinburgh, United Kingdom

January 2023 - May 2023

- Analyzed sales transaction data using SQL and Python to identify revenue trends and seasonal patterns across product lines

- Implemented the GPT-4 API for automated report generation and documentation, reducing manual writing time by 40%

- Created and maintained data quality checks in Python to flag anomalies in daily ETL pipelines

- Presented findings to stakeholders using clear visualizations and written summaries of statistical significance

Data Science Graduate Placement

Financial Analytics Ltd

www.financialanalytics.net

Edinburgh, United Kingdom

September 2022 - December 2022

- Preprocessed and cleaned 2 million financial records, identifying and resolving data integrity issues before model training

- Built linear regression models to forecast quarterly revenue with mean absolute percentage error of 3.8%

- Documented data workflows and model assumptions in reproducible Python scripts for team handover

- Assisted senior analysts in feature selection processes using correlation analysis and domain expertise consultation

EDUCATION

University of Edinburgh

BSc Statistics with Data Science

Graduated: June 2022

Grade: Upper Second Class Honours (2:1)

Relevant modules: Machine Learning, Statistical Inference, Time Series Analysis, Data Visualization, Experimental Design

TECHNICAL SKILLS

Programming Languages: Python, SQL, R

Data Analysis and Visualization: pandas, NumPy, matplotlib, seaborn, Tableau

Machine Learning: scikit-learn, XGBoost, logistic regression, decision trees, random forests, clustering

Statistical Methods: hypothesis testing, regression analysis, exploratory data analysis, A/B testing

Tools and Platforms: Jupyter Notebook, Git, PostgreSQL, Excel, Google Analytics

Other: Feature engineering, model evaluation, data preprocessing, basic ETL workflows
