PROFESSIONAL SUMMARY

I'm a Staff Engineer with 12 years of experience building scalable systems and leading technical initiatives across fintech and enterprise infrastructure. I've spent the last six years mentoring engineering teams while maintaining hands-on involvement in architecture decisions and complex problem-solving. I'm particularly interested in distributed systems, event-driven architectures, and creating engineering cultures where people do their best work. Based in Cambridge, I'm looking to leverage my experience to drive technical excellence at organisations tackling challenging infrastructure problems.

WORK EXPERIENCE

Staff Engineer

Quantum Dynamics Solutions

quantumdynamics.io

Cambridge, United Kingdom

March 2021 - Present

Led the design and implementation of a real-time event processing platform handling 2 million events per second, serving 50+ enterprise clients across EMEA region. Mentored a team of six senior engineers on cloud architecture patterns, code review standards, and technical decision-making frameworks. Architected a microservices migration strategy for a legacy monolith, reducing deployment time from 45 minutes to 8 minutes and improving system reliability to 99.99% uptime. Established and championed a technical excellence programme including automated testing standards, security reviews, and performance benchmarking across all services.

Senior Staff Engineer

Clearpoint Financial Technologies

www.clearpoint.co.uk

London, United Kingdom

September 2017 - February 2021

Owned the entire data infrastructure team responsible for processing daily settlement operations for over 200 financial institutions. Designed and deployed a fault-tolerant distributed ledger system in Golang that reduced reconciliation time by 73% and eliminated over 50 manual reconciliation processes. Led quarterly architecture reviews with C-suite stakeholders, translating complex technical concepts into business impact metrics and securing budget approval for infrastructure investments. Established on-call practices and incident response procedures that reduced mean time to resolution from 4 hours to 22 minutes.

Senior Engineer

Nexbridge Solutions Ltd

nexbridgesolutions.net

Cambridge, United Kingdom

June 2012 - August 2017

Developed and maintained a suite of microservices supporting identity verification and fraud detection for e-commerce platforms across 15 countries. Built a real-time machine learning pipeline using Apache Spark and

Python that improved fraud detection accuracy from 84% to 94.3% while reducing false positives by 41%. Took ownership of platform stability during a critical period, implementing comprehensive monitoring with Prometheus and ELK stack that provided visibility into 200+ application services. Conducted technical interviews and contributed to hiring efforts that helped grow the engineering team from 8 to 32 people over five years.

EDUCATION

BSc Computer Science

University of Cambridge

Cambridge, United Kingdom

Graduated: June 2012

TECHNICAL SKILLS

Languages: Go, Python, Java, SQL, Bash

Cloud Platforms: AWS, Google Cloud Platform, Azure

Databases: PostgreSQL, MongoDB, Cassandra, Redis, DynamoDB

Message Brokers: Kafka, RabbitMQ, AWS SQS

Containerisation: Docker, Kubernetes, Helm

Monitoring and Observability: Prometheus, Grafana, ELK Stack, Datadog

Infrastructure as Code: Terraform, CloudFormation

Distributed Systems: Event-driven architecture, microservices, eventual consistency

Version Control: Git, GitHub, GitLab

Testing Frameworks: pytest, JUnit, Go testing
