PROFESSIONAL SUMMARY

DevOps engineer with 4 years of hands-on experience building and maintaining cloud infrastructure across AWS and Azure environments. I've spent the last 3 years at my current role automating deployment pipelines and reducing our infrastructure costs by managing containerised workloads. I'm comfortable working across the full stack from infrastructure as code through to application monitoring, and I particularly enjoy solving problems that bridge the gap between development and operations teams.

WORK EXPERIENCE

Senior DevOps Engineer

TechFlow Solutions

www.techflow.io

Edinburgh, United Kingdom

June 2022 - Present

Designed and implemented Kubernetes clusters supporting 15+ microservices with automated scaling based on resource metrics, reducing infrastructure costs by 28 percent year-on-year

Established comprehensive CI/CD pipelines using Jenkins and GitLab CI that reduced average deployment time from 45 minutes to 12 minutes across all production environments

Built Terraform modules for infrastructure provisioning across AWS VPC, RDS, and ECS resources, enabling new projects to spin up production-ready infrastructure in under 30 minutes

Implemented centralised logging and monitoring using ELK stack and Prometheus, cutting incident detection time from 2 hours to 15 minutes on average

DevOps Engineer

DataVault Systems

www.datavault.co

Edinburgh, United Kingdom

September 2021 - May 2022

Migrated legacy applications from on-premises servers to AWS EC2 and RDS, achieving 99.9 percent uptime and reducing monthly infrastructure spend by 35 percent

Containerised 8 Python and Node.js applications using Docker and pushed container images to AWS ECR, establishing standards for all future application deployments

Configured automated backup and disaster recovery procedures using AWS native services, achieving 2-hour RTO and 30-minute RPO requirements

Maintained and updated monitoring dashboards in CloudWatch and created runbooks for common incidents, reducing on-call response time by 40 percent

Junior DevOps Engineer

Nexus Digital

www.nexusdigital.net

Glasgow, United Kingdom

July 2020 - August 2021

Supported deployment and management of applications across AWS, assisting with EC2 instance provisioning, security group configuration, and load balancer setup

Created bash and Python scripts to automate routine infrastructure tasks including log rotation, backup verification, and system health checks

Collaborated with the development team to troubleshoot application performance issues and implemented caching solutions using Redis that improved response times by 25 percent

Documented infrastructure architecture, runbooks, and deployment procedures, creating a reference library for the 6-person team

EDUCATION

BSc Computer Science

University of Edinburgh

Edinburgh, United Kingdom

Graduated June 2020

SKILLS

Cloud Platforms: AWS, Azure, Google Cloud Platform

Container Orchestration: Kubernetes, Docker, Docker Compose

Infrastructure as Code: Terraform, CloudFormation, Ansible

CI/CD Tools: Jenkins, GitLab CI, GitHub Actions

Monitoring and Logging: Prometheus, Grafana, ELK Stack, CloudWatch, New Relic

Databases: PostgreSQL, MySQL, MongoDB, DynamoDB

Programming Languages: Python, Bash, Go

Version Control: Git, GitHub, GitLab

Networking: VPC configuration, DNS, SSL/TLS, load balancing

Operating Systems: Linux, Ubuntu, CentOS, Windows Server
